The Acornsoft Hits

Volumes 1 & 2

These Acornsoft Hits compilation packages are the results of the recently announced venture between Superior Software and Acornsoft. The games have been carefully chosen to offer a balanced selection of the very best of Acornsoft's classic titles ... at a price that is simply stunning value-for-money.

Acornsoft Hits Volume 1

Magic Mushrooms "What's magic about Magic Mushrooms? A lot. It's great stuff; go and buy it — you won't be disappointed." ... Acorn User.

Planetoid "It's fast and fun, annoying and addictive. In fact, it's one of the classic micro arcade games." ... Electron User.

Maze "Maze has certainly become my favourite pastime for the moment, and I'm sure I'll be playing it for some time to come." ... Acorn User.

Rocket Raid A superb sideways-scrolling arcade style game. You must fly your spaceship through the planetary caverns wherein are deadly aliens, guided missiles meteor storms and many other hazards.

Acornsoft Hits Volume 2

Starship Command Command a starship against the attacking aliens in this demanding high-resolution graphics game. Your ship is equipped with shields, long and short-range scanners and a sector display of the stars and alien ships.

Arcadians Watch out for the deadly dive-bombing tactics of the Arcadians as they fly in convoy overhead. 1-player and 2-player options, intriguing music and a demonstration mode are some of the features of this excellent game.

Meteors Steer your laser-ship through a hail of meteors, smashing them with your laser bolts as they hurtle towards you on all sides. Avoid being hit by missiles from the flying saucers. The hyperspace escape facility is available as a last resort.

Labyrinth Guide Mork through the labyrinth, eating fruit to replenish his dwindling energy supply. Crush the Tiger Moths, shoot the Filterbugs and dodge the Threshers as you venture towards the magic crystals.

Acornsoft Hits Volume 1

Acorn Electron dual cassette £9.95
BBC Micro dual cassette £9.95
BBC Micro 5 1/4" disc £11.95
BBC Master Compact 3 1/2" disc £14.95

Acorn Electron Versions

Rocket Raid and Labyrinth are not available for the Acorn Electron.
The Acornsoft Hits Volume 1 features:
Magic Mushrooms, Planetoid, Maze, Monsters.
The Acornsoft Hits Volume 2 features:
Starship Command, Arcadians, Meteors, Snooker.

Acornsoft Hits Volume 2

Acorn Electron dual cassette £9.95
BBC Micro dual cassette £9.95
BBC Micro 5 1/4" disc £11.95
BBC Master Compact 3 1/2" disc £14.95

The BBC Micro versions are compatible with the BBC B, B+ and Master Series computers.

News

All the latest products and news in the ever expanding world of the Electron.

5

Adventures

More tips, clues and magic spells from our resident wizard as he endeavours to help those stuck in far away and long forgotten lands.

10

Software Surgery

Our panel of reviewers has been busy over the past few weeks: Dunjunz, Paperboy, Hunky Dory, Wychwood and Uranians are all given a thorough workout.

16

Flashers

Create eight new flashing colours in Mode 2 with this short but useful utility.

19

Cubit

Climb the pyramid and paint the blocks while avoiding bouncing balls and snakes in this fast multi-screen arcade classic.

21

Graphics

We continue our series for budding computer artists with a look at PLOT 85 and show how triangles can be combined to draw squares.

26

Lisp

The first in a new series exploring Lisp – the language used in artificial intelligence research.

29

Hungry Harry

Brush up on your mental arithmetic and help Harry serve the many customers in this busy seaside greengrocer's shop.

32

Hardware Review

Advanced Computer Products' Battery Backed Ram comes under the microscope this month.

37

Basics

Are FOR-NEXT loops driving you crazy? Our down-to-earth series for those new to Basic unravels this useful command.

40

Patience

Try your hand at this Electron version of the classic card game. It really will try your patience!

43

Micro Messages

The pages you write yourselves. A selection from the many lively, interesting letters from our bulging mailbag.

47

10 Liners

Two short yet most impressive listings from our clever readers.

55

SEDFS

We test Slogger's DFS upgrade for Cumana disc interface owners.

56

Dragon Curve

Explore the fascinating world of recursion with this super graphic demonstration.

58

Hardware Projects

Part six of the series shows how to access the Plus 1's analogue port from machine code.

59

Bargains galore!

Don't miss our special offers on Pages 50-53.

OXBRIDGE

AT LAST IT'S HERE - A FULLY ILLUSTRATED ADVENTURE FOR THE BBC/ELECTRON - 300 GRAPHIC LOCATIONS ON BBC, 200 GRAPHIC LOCATIONS ON ELECTRON

Oxbridge is an Adventure which takes a light-hearted look at the world of higher education. The cursor keys move you about a beautifully illustrated landscape to meet various brain-teaser type problems. If you like puzzle books, you'll love this game. It is no marathon science-fiction epic taking hours to get into. You make progress within minutes and as you play you absorb the atmosphere and folklore of the world's most famous university.

The author is an Oxford-based mathematician and puzzle composer who has used his skills to pack an incredible 300+ pictures into the BBC's memory. facility, mobile talking cha personalities!), single operatio graphics.

PHANTOM

Something strange has been happening, something unnatural. At first no one took much notice, those who'd experienced it were considered crackpots by those who hadn't. But now people are noticing, the so called 'crackpots' now outnumber the disbelievers.

And so the scene is set. As a Professor of Astro-Physics with more than a passing interest in Psychic Phenomena you are well prepared for the situation. Equipped with your experimental nuclear accelerator you prepare for what could be the world's final conflict, one dimension against the other, life versus death. And so the war begins.....

THIS GAME, ORIGINAL IN DESIGN AND CONCEPT, IS ONE OF THE NEW BREED OF ROLE PLAYING GAMES, THAT HAVE ROCKED THE CHARTS AND THE ARCADES IN RECENT MONTHS.

NOW AVAILABLE FOR YOUR COMPUTER.

electron user NEWS

More sophisticated products for Electron

FEATURES usually found on far more sophisticated machines are now being made available to Electron users.

In yet another big vote of confidence in the little favourite more and more new, serious products have been put on the market recently.

Advanced Computer Products launched the Advanced Control Panel at the May Electron & BBC Micro User Show in London.

Described by ACP boss John Huddleston as "a significant piece of software", the 16k rom allows the user to produce a customised and nested menu system.

You can access files, load favourite programs, prepare the computer for a specific use, and generally make the machine much friendlier to

use. In effect it brings some of the facilities of the Master to the Electron.

Huddleston said it had taken six months to develop the product, which was compatible throughout the Acorn range.

"It is not just another crazy thing, it is a major product. It does what Gem and the rest do for the bigger machines", he said.

"Using pull-down menus it gets the machine to do what you want it to do without being a professional programmer". Price is £34.50.

Sideways ram is being presented in a more sophisticated manner, too. Two new products have been introduced recently.

Slogger's 32k Sideways Ram is designed for use with the Rombox Plus or the Plus 1

and comes in the form of a cartridge.

The 32k occupies both 16k pages in one cartridge port and when used with another new Slogger product, the Electron Expansion 2.0, it can be used to hold rom images and/or a 16k printer buffer.

The cartridge has full write protect, so preventing corruption of the software contained. Price £34.50.

ACP has produced the Advanced Battery Backed Ram. It has 32k split into 16k blocks and comes with software, which enables you to use it as a printer buffer and load, save and create your own roms. Price £39.95. (See review on Page 37.)

The Electron Expansion 2.0 fits into an internal rom socket. It overcomes Plus 1 loading errors and supports

all standard functions.

It includes commands for using the sideways ram as a printer buffer and romsave/load commands to produce images for sideways ram. It costs £11.95 on its own or £5 with the 32k Sideways Ram.

Both companies report continued high sales of peripherals, Plus 1 – which Huddleston says is being sold about as fast as it can be made – and Rombox Plus.

More sophistication for the Electron comes with a device from Project Expansions.

The firm has just produced an upgraded version of its user port which allows the Electron to work with Watford Electronics' Video Digitiser.

The new port's 20-way connector is accessed from the top of the cartridge, to help disc drive owners use it more easily. Also a rom socket has been included for any standard 8k or 16k rom or eeprom to be inserted.

Costing £29.95, the port needs a turbo board and disc drive, and a printer is desirable.

Watford's Video Digitiser allows images to be captured through any standard video socket.

Once a picture is displayed it can be treated as a normal graphics screen, allowing you to use any standard graphics command to manipulate it, either from Basic or another sideways ram.

New turn in games

AN Electron motorbike race game that turns corners – two firsts for the machine – is nearing completion.

Described by its programmer as a fun game rather than a simulation, it has the working title of Craze Rider.

Superior Software is expecting great things from the game when it is released in the summer. Author Kevin

Edwards – pictured left – said the main difficulty in producing corners for the Electron was the machine's speed.

There are a series of tracks and to qualify to race in the next one you have to finish in the first six.

You can bump the computer controlled bikes off the road – but they can do the same to you.

Electron keeps the darts peace

THERE are never any arguments about scoring when it comes to darts matches at the Queen's in Birmingham these days.

For the pub team has dispensed with the traditional blackboard and chalk in favour of an Electron.

Now Peter Black, the official scorer, simply types in the results and the program automatically displays on the monitor what is still required.

"I decided to use my Electron after some rather nasty rows involving players from visiting teams", says Peter, a butcher. "On two occasions we nearly came to blows when someone disagreed with my subtraction.

"So rather than risk getting thumped by some argumentative drunk, I brought in the Electron".

And it has worked. For so far no one has seen fit to challenge the computerised figures.

"People seem so impressed to see the numbers flash up on the screen that they have implicit faith in them", says Peter.

"But strangely enough on the first couple of occasions I used it I made more mistakes - through hitting the wrong keys - than I ever did when I used to do the scoring in my head".

However the Electron hasn't done away with darts tradition altogether in the Queen's.

For Peter Black still calls out the numbers before programming them into the micro.

"It wouldn't be the same unless they could hear me saying 'One hundred and eighty', he told Electron User.

Derek Meakin and 149 fellow diggers attack the green field site of the new headquarters

The big Database dig

THE world's first mass sod-cutting ceremony heralded the start of building a new £1 million home for Electron User and its sister Database Publications magazines.

All of the 150 Database employees took part in the traditional act of ground-breaking to celebrate their role in the company's rise to prominence in computer magazine publishing.

The new site in the Cheshire countryside near Stockport echoed to the sound of scores of spades and shovels hitting the ground simultaneously at a signal from Database head Derek Meakin.

"We originally toyed

Digitised impression of the Electron User's new home

with the idea of inviting a leading figure in the computer industry to perform the ceremony", he said, "but decided instead to keep it within the company.

"All our employees have contributed to Database becoming the UK's leading publisher of computer magazines - so they all deserved to play a part on the big day".

LIT-UP JOYSTICK

A NEW joystick for the Electron has been launched by Voltmace.

A special feature of the Delta 3S is a set of lights which allows the user to know exactly how far the joystick must be moved in any direction to operate.

Rotary slides - initially greeted with scepticism - have proved most reliable, says the company. They have been included in the new product and have the advantage of eliminating feedback from the switches. Price £19.95.

Manager moves over

ONE of the first results of Prism's take over of the Addictive Games label is the release on the Electron of the best selling soccer computer game ever, Football Manager - at £2.99.

"This means", says Prism

"that the game, in its new packaging, will be competing in a new division against the budget software teams.

Prism (01-804 8100) is planning to re-launch Addictive's Silicon Joy label to carry more budget-priced games.

Magus for Electron

WHEN Robico revamps and re-releases the old Magus adventure, Village of Lost Souls, it will ensure that Electron users are not left out in the cold this time.

The original was never released on the machine but Robico plans to rectify that once work is completed on improving the game. This will involve restyling it to fit in with the current Robico range using the company's advanced parser.

Due out in the summer, it will be retitled Realm of Chaos - Village of Lost Souls.

A.C.P. are proud to announce they are now producing the Acorn Plus 1

Introductory Price £49.95 inc VAT

AMX MOUSE

POINTS THE WAY FOR THE ELECTRON USER

AMX MOUSE

Catch an incredible AMX MOUSE! The advanced opto-mechanical device that brings to your ELECTRON facilities once only available on more expensive computers. Now you can use ICONS, WINDOWS, AND POINTERS in your own programs.

AMX PACKAGE

Plug the MOUSE into the user port, and the EPROM into your A.P.5. The latter contains fast machine code routines for creating on-screen windows, icons and pointers. And means that the MOUSE buttons can be programmed for use with commercial software such as Wordwise and View. There are two manuals included, explaining how to operate the MOUSE and the ROM routines, which are available in both basic and machine code programs.

Included in the package are two superb programs

AMX ART has to be seen to be believed! It's a computer-aided drawing program that's just as good for serious applications - such as the preparation of detailed architectural and engineering drawings or teachers' worksheets - as it is for having lots of family fun! And if you're artistically inclined, you'll be astonished at the quality of work you can produce and save. It makes full use of on-screen menus, pull-down menus and icons: the ideal, easy way for novices to learn and gain in confidence.

ICON DESIGNER is an invaluable program for creating and storing icons for use in your OWN programs.

The ACP/AMX mouse package may be used on an ELECTRON fitted with a PLUS 1 & AP5. The 'ART' software is supplied on cassette but can be transferred to DISC (DFS not ADFS)

£69.95

MOUSE PACKAGE + AP5 £125.00

THIS IS WHAT ELECTRON USER SAID ABOUT A.P.5:-

"Looking at the A.P.5. shows it to be constructed to a high standard, it looks solid and robust. The A.P.5. interface opens up the new Electron for a whole new type of computing." E.U Dec '86

NEW PRODUCT

Advanced Battery-backed RAM for Master and Electron users. A battery backed 32K RAM cartridge A.B.R. is a self-contained cartridge containing two 16k pages of sideways RAM with a re-chargable battery back up. Each 16k page can be individually locked by software. Supplied with full software support, to include loading software, ROM save, advanced print buffer and a disc utility MAKEROM.
(08/M/E H) - £39.99
"It's a superb Addon and a must for all serious Electron Users" EU June

Advanced Computer Products

ADVANCED CONTROL PANEL

(20/M/B/E/C) £34.50
ACP is a front end control panel language providing a sophisticated yet friendly interface between user and computer for access to Languages, MOSS functions and the users own file utility etc. Main features include pull down windows, simple to change MOSS configure, floating point calculator, file manager, SW ROM's facilities.
(16K EPROM & FULL MANUAL)

ADVANCED DISC TOOLKIT

(01) /M/B/E/C £34.50
Any Acorn user including Master, BBC B+, Electron, DFS, 1770 DFS, ADFS, 2nd. & co-processors A.C.P.'s BEST SELLING product containing over 30 commands inc.: powerful memory & disc editor, search memory/disc/basic, catalogue/unplug ROMS, load/run programs below page, automatic menu, file transfer (inc. locked cassette files), ADFS utility etc. etc. ("it's superb" ... Database Pub. - "A top-class toolkit - I have no hesitation in recommending it ... Acorn User Nov. 86)
(16K EPROM & FULL MANUAL)

ADVANCED ROM ADAPTOR 2

(03) /M/E+1/ £14.95
An Acorn approved cartridge containing a card with special 'zero' profile sockets that allow you to fit compatible 8K or 16K EPROMS/ROMS. The cartridge is fully enclosed providing complete protection for your ROMS. Simple to use - no switching - complies fully to the Acorn (sideways) Rom Filing System. A.R.A.2 contains 2 sockets... A single adaptor is also available...
A.R.A.1 (02)/E/ £10.35 "The best ROM cartridge is by far the ACP A.R.A.2" ... A+B Dec 86

ADVANCED SIDEWAYS RAM

(04) /E+1/ £29.90
A highly versatile but simple to use s/w RAM cartridge that is automatically write protected on loading. Contains 16K RAM but can be switched (externally) to 2 X 8K RAM. Supplied with instructions & full software support (on cassette) to save ROM images to disc/tape, load RAM from file. Advanced Print Buffer & MakeRom a utility to merge several files from disc to be run from the ROM FS.
(S/Ware on disc: please add ...
£1 5¼ DFS .. £2 3¼ ADFS)

ADVANCED ELECTRON DFS

(05) /E/ £24.15
Electron & Plus 3 users ... gain BBC compatibility by adding the Advanced Electron DFS (1770 DFS) this is the same disc filing system supplied with the BBC B+. Now you can produce and access (compatible) BBC disc based software. A.C.P. also supplies 5¼" disc drives to add to your Plus 3 (inc. 2nd drive adaptor). "ACP has produced another superb ROM for the Electron" ... Electron User Feb '86
(supplied on 16K EPROM + DFS MANUAL)

ADVANCED DISC INVESTIGATOR

(06) /M/B/E/C £28.75
A very powerful Disc utility for standard & non-standard discs. Backup most protected discs, edit any type of non-standard disc, check & repair faulty tracks, create new disc formats, copy 40track discs to 80track discs, verify two non-standard discs.
("ADI features an extremely comprehensive sector editor, and one of the finest I've seen" ... TubeLink on Prestel)
(supplied on 16K EPROM + manual)

ADVANCED ROM MANAGER

(07)/M/B/E/C *£14.95*
A friendly utility for ROM & sideways RAM. Examine ROM/RAMs, load files into RAM, move memory to/from Sways ROM/RAM, catalogue/kill ROMS, offer commands to specific ROMS, save ROMs to disc/tape, AUTOROM a file (inc. BASIC) to run from Sways ROM/RAM, execute specific machine code subroutine in a ROM, generate a ROM's checksum & CRC. "Represents amazing value for money. Go out and buy this real bargain" ... Dec 86 Database Publications. (supplied on EPROM + manual)

ADVANCED PLUS 4

(08) /E+1/ £79.98
"DISC DRIVE COMPATIBILITY AT LONG LAST" ... (Electron User June '86) this sums up AP4 & ACP's approach to producing products. AP4 is a fully ACORN compatible disc I/Face & will accept any standard drive (inc. PSU), runs 1770 DFS (as fitted in the B+ & Master), keeps page & EEP. utils in ROM & provides a spare rom socket. "ACP's PLUS 4 comes out on top. I can recommend it to anyone" ... (E.U. June '86)
...AP4 should be considered the standard interface for the Electron (AU July '86)
AP4 100 £199.00 (inc VAT & Securicor delivery)
AP4 400 £299.00 (inc VAT & Securicor delivery)

ADVANCED PLUS 5

(09)/E+1/ £66.70
A triple interface cartridge providing:
1) a TUBE I/Face allowing a second processor to be connected, increasing BOTH speed & memory (PAGE & 8000 HIMEM & 8000 in all modes)
2) a 1 MHz BUS for control applications & prommers
3) the USER PORT for mouse and graphic devices.
Also contains 2/3 ROM sockets and on board operating software for 2nd processor

ADVANCED 1770 DFS

3 versions ADM/C(11) - ADB(12)
ADE (13) £34.50
ACP have totally re-written the Acorn 1770 DFS, enhancing existing features & adding new ones. The result is probably the fastest & most powerful disc filing system your computer could have. With the ability to operate in double density occupying both sides of a disc (640K). Automatic file relocation, improved file handling, 62 file catalogue and Sways RAM can be used as a fast RAM DISC.
(16K EPROM + comprehensive manual)

ADVANCED ELECTRON DFS E++

(14) /E+ASR/ £19.99
An alternative to our AED(05) for Plus 3 and ASR users. This optional alternative DFS is designed for use in Sideways RAM (ASR) and allows the user to operate a disc filing system & E++ when using the Plus 3 (in ADFS page would normally be £10.00). The DFS is simply loaded using the software supplied with the ASR from disc. (optional upgrade for existing AED users £9.50 on return of original EPROM) (3½" ADFS disc + manual)

NEW EXCLUSIVE PRODUCT ELECTRON ASSEMBLY LANGUAGE

Book by Bruce Smith £4.95 (144)

Top 20 surprise - geezers dodge in at No.3

IT'S Top Twenty time again, and this month the chart makes very interesting reading.

Although few people will be shocked to see Myorem occupy the top spot and Woodbury End holding on to second place, it is surprising to see Dodgy Geezers enter the chart at number three.

This adventure seems to have tickled a lot of people, but it looks like being Lever and Jones' last text adventure for some time to come, as the dynamic duo are currently flaunting their writing talents in other fields.

Out of the chart since last time have gone Twin Orbs of Aaliner, Incredible Hulk, Savage Island 1, Dracula Island and Sadim Castle to be replaced by Dodgy Geezers, Castle of Riddles, Wychwood, Mystery Fun House and Operation Safras.

The next chart is due in the October *Electron User*, and it will be fascinating to see the effect upon the pecking order of recent releases such as Blazing

Star and The Lost Crystal.

Some time ago I asked for readers' responses to an idea concerning a competition for home-penned adventures. The positive mail on this suggestion has been phenomenal. So, a competition there will be!

If readers wish to send me, either on cassette or 5.25in disc, any adventure they have written, I will evaluate it. It can be in either Basic or machine code or produced with the aid of one of the adventure-writing aids such as The Quill from Gilsoft.

How you write it is up to

you, all I am interested in is the quality of the finished product. A listing and/or full solution would be much appreciated too.

The address to send them to is: Adventure Contest, Electron User, Europa House, 68 Chester Road, Hazel Grove, Stockport SK7 5NY.

The closing date for entries to this is July 31 1987. The winner's adventure will be included on the *Electron User* monthly tape and will receive a bundle of five top class text adventures of his or her choice.

I am afraid I am unable to

return any entries, so send a copy, not your original game.

I must find room to comment briefly on Epic's The Lost Crystal. If you haven't yet got a copy, you must have been on the moon for the past two months.

I am having immense fun tackling this adventure and have so far discovered about 100 of the 400 plus

PROBLEMS SOLVED

After some months respite, it appears that Sphinx Adventure has reared its head again with a multitude of problems.

Jackie Billings asks where she can find the mouse. If you make your way back to the troll's bridge and from there go to the bear's cave you are on the right track.

You must then enter the iron passages and find Castle Hill. The mouse will then be discovered scurrying around the dungeons of the castle.

Anthony Craven wants to know the purpose of the Mithril ring. It has magical properties and should be rubbed.

Anthony and Daniel Gilbert need to find the pirate's hideout. You should cross the glacier and then explore the catacombs.

Georgia Corrick has been stuck with Sphinx for over a year now and doesn't seem to be able to progress further than the fiery passage.

READERS' TOP TWENTY

1	Myorem	Robico	96
2	Woodbury End	Shards	91
3	Dodgy Geezers	Melbourne House	90
4	Rick Hanson	Robico	89
5	Operation Safras	Shards	88
6	Wheel of Fortune	Epic	87
7	Castle of Riddles	Acornsoft	86
8	Philosopher's Quest	Acornsoft	85
9	Project Thesus	Robico	84
10	The Ferryman Awaits	Kansas City	83

18	Mystery Fun House	Adventure Soft UK	68
19	Hampstead	Melbourne House	67
20	Countdown to Doom	Acornsoft	64

locations. I still keep thinking about that poor miller!

Another adventure which should be drawn to your attention is the Electron Adventure Club's *Magnetic Moon*. In three parts, it is a bargain at £4.95, or free to club members.

Finally, watch out next month for a special on that superb adventure, *Myorem*.

You need to collect water in the bottle and throw the water at the walls of flame. Also if you map your progress, you can avoid the pirate altogether.

Andrew Myers tells me that there is no need to cross the lake in *Sphinx Adventure*. The only reward for doing so is to obtain the crown, but you lose the boat, which is worth 30 points. Hence you can finish the game more quickly and with almost maximum points.

Can anyone beat 279 moves?

While on the subject of *Sphinx*, I must thank Mr R. Gudgeon for a super extension of Simon Doyle's listing for the function keys. Mr Gudgeon has successfully programmed the first 30 moves of the adventure on one key.

Anybody who would like a copy of this listing should send me a stamped addressed envelope.

I have received numerous requests for help with *Adventure Soft's Kayleth*. Colin Campbell wants to know how to escape from the conveyor belt. You must bend the bars and go up, Colin.

Emma Rutherford and partners are experiencing difficulty in getting the *Yagmok* to speak. He doesn't like androids with coloured eyes, so a bit of thinking is required.

Meanwhile, Sir Galahad asks why he can't see with the lenses. I think that you should only use them in bright light, my Lord.

TKV has its fair share of problems this month. Alexis Adamou of Cyprus writes to say that he can't find the bag. Which bag are you referring to Alexis, as there are five different ones?

Perhaps you should look in the mountains for the first one.

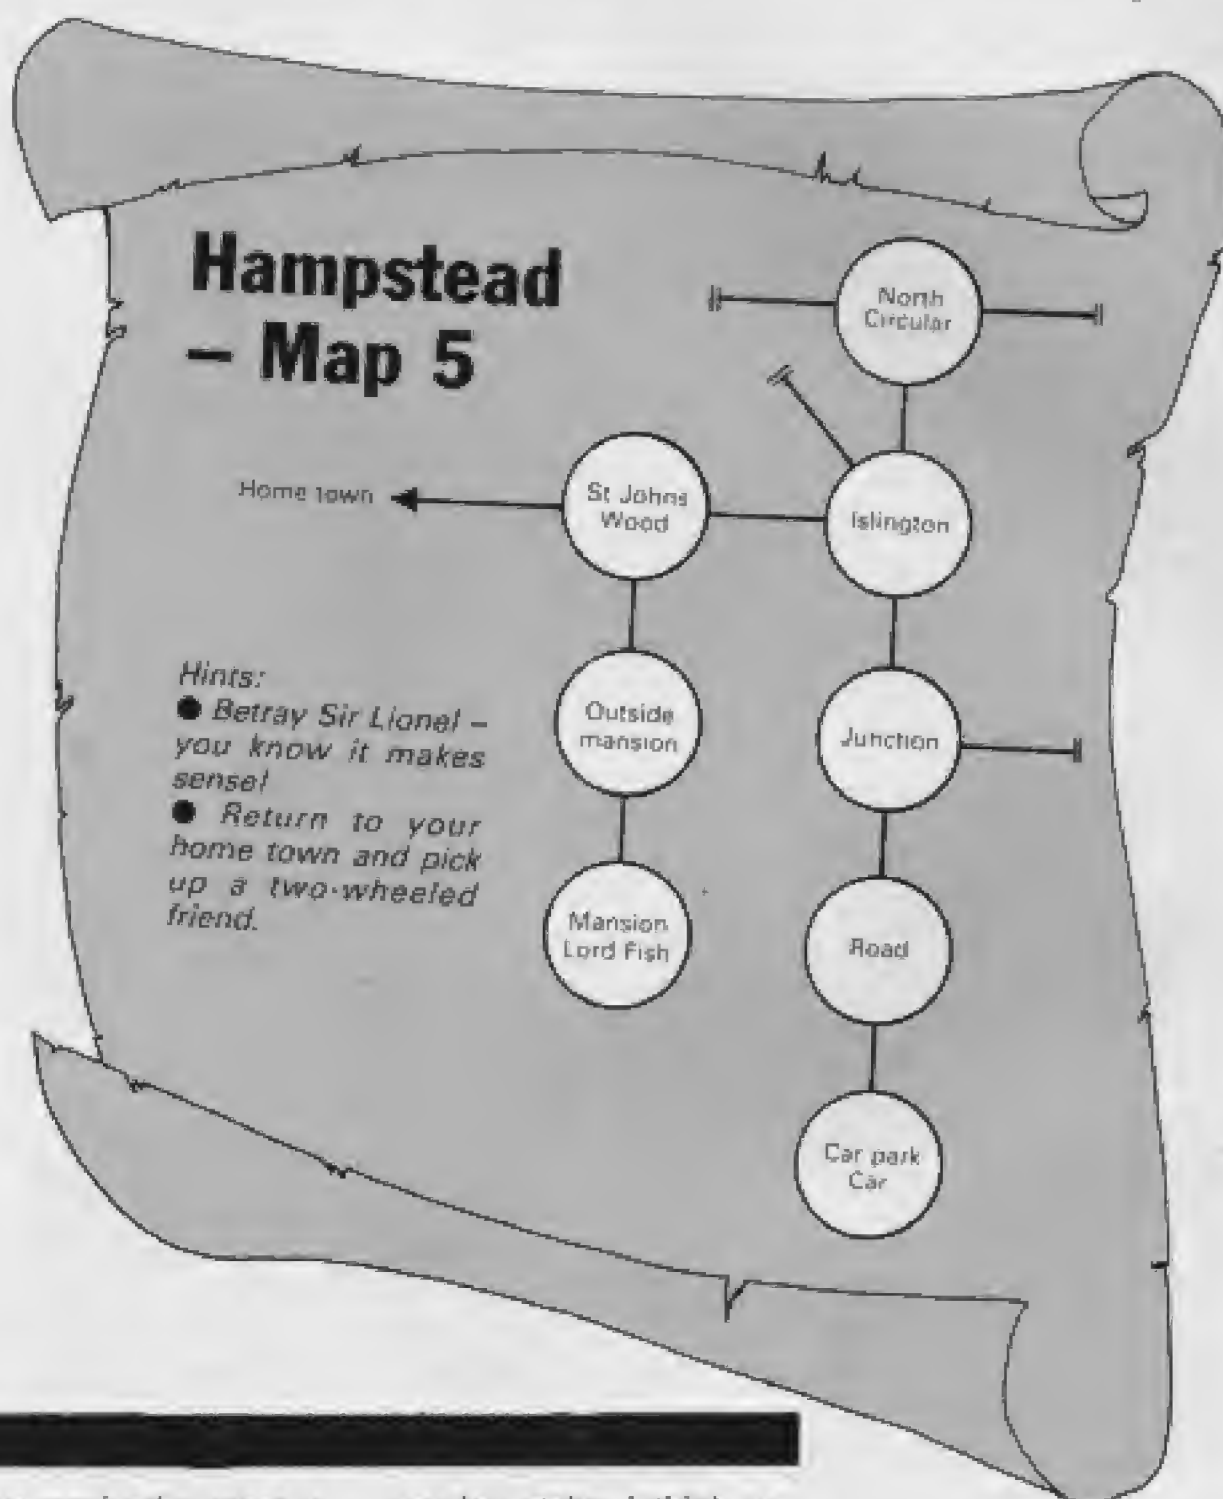

Ben, who's only 10, asks where he can find the

wooden stake. I think you mean the wooden staff, and that will be discovered in the west turret of the castle.

Edward Duncan has found the secret of life, but can't proceed any further. Without giving you a full solution, I suggest that you make a detailed map of your travels and read the advice offered in previous editions of this column.

Finally, in order to whet your appetites for next month, here are a couple of hints to help the multitude of people who are stuck at the beginning of *Myorem*.

You have no option but to THINK if you wish to escape the firing squad. Your means of escape from the ditch must lie in careful manipulation of the objects you find in order to build something which will float. I promise to be more specific next month.

Hints:

- Betray Sir Lionel - you know it makes sense!
- Return to your home town and pick up a two-wheeled friend.

Adventure database

Included on this month's *Electron User* cassette is a massive database containing all the adventures available for the *Electron*. Also included are adventures for the *BBC Micro* that run on the *Electron*. You'll find the name and address of each software company, a list of the adventures they produce and whether they are available on tape or disc. This is stored as a *View* text file and can be loaded into *View* using *READ*. You can then print it out or save it to disc.

This is an absolute must for all adventurers!

HALL OF FAME

Arrow of Death 1 - John Tipper (continued)

Return to the courtyard, get the amulet from the messenger, go to the forest and WAIT. Go to the ferry, GIVE AMULET then after the ferryman has taken you aboard, WAIT. Find the slave and CUT CHAINS, go to the boulder and move it.

Now go to the circle of toadstools and GET TOADSTOOL. Go to the Cookhouse and DRUG BROTH. Wait a couple of moves then GO BUILDING, GO LADDER, TAKE LOG, GO WEST and GO FLUME.

When you are in the sea, WAIT and you will see a beach. GO BEACH and find the eagle, then PLUCK EAGLE. Go to the dwarf's hut, examine the dwarf then examine his hut. Take his specs, GO NORTH to the village, examine the debris, go down through the trapdoor and open the chest.

Use the specs to read the book then go back to the hut and GET MEDALLION. Proceed to the marsh, enter and go to the sacred willow location. Throw the medallion to get rid of the guardians. Finally CUT BRANCH and you will have finished Part 1 of this adventure.

Enthar Seven - The Boss (continued)

You are now in the Command Centre and a thorough exploration of your surroundings is vital to further progress in this adventure. You will discover some objects and locations whose purpose does not become evident until much later in the adventure. Making a map of the Command Centre is also an important step to take.

In the meantime this should enable you to solve some of the more immediate problems: SWITCH ON TORCH - WEST - CLIMB UP SHELVES - TAKE POWER CELL - DOWN - TAKE VACUUM CLEANER - EAST - SOUTH EAST - SOUTH EAST - EAST - SOUTH - OPEN DOOR - SOUTH - TAKE PLASTER - TAKE GLOVES - NORTH -

NORTH - EAST - SIT DOWN - TAKE CUSHION - EXAM CUSHION - TAKE NOTE - EXAM NOTE - READ WRITING - STAND - EAST - TAKE PICTURE - DROP PICTURE - EXAM MICROPHONE - WEST - WEST - WEST - NORTH WEST - NORTH WEST - EAST - EXAM VACUUM CLEANER - REMOVE DUST BAG FROM VACUUM CLEANER - EXAM DUST BAG - STICK PLASTER ON DUST BAG - ATTACH DUST BAG TO VACUUM CLEANER - INSERT POWER CELL INTO VACUUM CLEANER - NORTH - DOWN - CLEAN DUST WITH VACUUM CLEANER - OPEN TRAP DOOR - DOWN - PULL LEVER - UP - UP - SOUTH - WEST - WEST - DROP VACUUM CLEANER - SEARCH STORE - TAKE SPANNER - EAST - NORTH - NORTH - SOUTH - SOUTH - SOUTH - PRESS S1.

You are now about to enter Sector 1 on the Planet of Enthar Seven.

The Time Machine - Chris Lowe (continued)

The four locations you can arrive at are: *The Cellar* - this is where the machine starts off. *The Sphinx* - to enter the Sphinx, push the projecting stone. To get out, jam the lever with a rock and leave by the door to the north. Climb the statue and you will find the prism. You can either kill the dog with a spear or feed him salt beef.

The Prehistoric Age - to move the brontosaurus feed it sea biscuits. To repair the boat, use the torn sail, needle and thread and the rope. Dig with the shovel on the island to unearth the prism.

The Mary Celeste - the prism can be found by climbing the brig.

Various items which are used in other puzzles are scattered around here. Unlock the door with the key and use the crowbar to open the chest.

OVERTURE AND

BEGINNERS

The vast majority of text adventures have a large element of magical or non-logical actions within them.

Some of the more naive adventure writers seem to think that we enjoy hammering at the keys for hours and hours before hitting upon some obscure magical word or action.

What usually happens in my case is that I give up long before then and play a better class of game.

Don't get me wrong, some of the best adventures around have elements of magic or the unexpected within them, but notice that they also give the player enough hints or clues to help sort out the incantations or whatever.

Sphinx Adventure is a good example of an excellent and immensely popular adventure which has a fair splattering of magic.

Early in the game you are faced with a gaping chasm which has to be crossed, and only a few possessions at hand. Do you THROW BOTTLE or DROP KEYS? Of course not, that would hold

no logic.

You ought to be carrying a wand, and surely WAVE WAND might have some effect at a time like this. Lo and behold a bridge now spans the chasm.

The next magical problem is more devious and involves a safe set in the ceiling. A quick exploration of neighbouring rooms unfolds a word, DIAXOS,

which must be magical. You could try rubbing the mithril ring, but saying DIAXOS might have a more desired effect.

You see, Paul Fellows only gives you one magical problem at a time to cope with, and the solution is always close at hand.

● *That's all for now. Next month you'll be amazed at my maze solutions!*

If you want to start doing more with your micro than just playing games, this package is your ideal introduction to the four most popular applications for professional computers. All the programs have been designed for simplicity, so even a child can use them. Yet they include advanced features not yet available on programs costing many times as much!

**Finalist for the Home Software
of the Year Award**

**Contains 32 page booklet giving clear,
easy-to-follow instructions on all 4 programs**

Word Processor: Ideal for writing letters and reports. There is a constant display of both time and word count, plus a words-per-minute display to encourage the budding typist! A unique feature is the double-size text option in both edit and printer mode – perfect for young children and people with poor vision.

Database: You use this for storing information, just like an office filing cabinet. Facts you have entered can be quickly retrieved by just keying in a word or part of a word. They can be sorted, replaced, saved for future use or printed out.

Spreadsheet: Enables you to use your micro for home accounts or pocket money records. It creates a display of numbers in rows and columns. Continuous updating is possible, and a changed figure can be instantly reflected throughout the rest of the spreadsheet. Your results can be saved, to be used for future updates, or can be fed into its associated program.

Graphics: Part of the spreadsheet section, it lets you draw bar charts, pie charts and histograms to give a graphic presentation of your statistics. Helps to give life and colour to the duller figures!

☆ **Word Processor** ☆ **Spreadsheet**
☆ **Database** ☆ **Graphics**

**Now they're
all together -
in ONE simple
package**

MASTER RAM BOARD

Upgrade your Electron to a 64k Machine using 32k of
Shadow RAM!

- Fits inside the Acorn Electron, uses no cartridge ports
- Compatible with ALL reliable Electron hardware (except TURBO DRIVER)
- Compatible with ALL Electron software, switching between 64k mode, TURBO mode (yes . . . the TURBO DRIVER IS BUILT IN), and normal mode.
- For correctly written software, HIMEM is ALWAYS AT 8000 in 64k mode so leaving 28000 bytes for BASIC or WORD PROCESSING in ALL screen modes.
- Doubles the speed of Word Processing.
- Up to 300% speed increase for games.
- Additional 12k for use as Printer Buffer with Electron Expansion 2.0.
- Installation Service for those not confident of soldering.

Master RAM Board kit - code MR2
- Now only £49.95

And now

THE ELK TURBO DRIVER

(Designed by Andyk Ltd)

RUNS ELECTRON SOFTWARE AT SPEEDS
COMPARABLE TO THE BBC

- Doubles the speed of Word Processing
- Up to 300% speed increase for games
- Fitted internally - occupies no cartridge ports
- Switchable "Normal/Turbo" speed
- Compatible with ALL existing hardware and software products (except the Master RAM Board)
- Installation Service - for those not confident of soldering

Turbo Driver Kit - code TD2 -
ONLY £29.95

Installation Service

- Guaranteed to upgrade your Electron with either the Master RAM Board or Elk Turbo Driver AND RETURN IT WITHIN 7 DAYS OF RECEIPT.
- Includes Postage paid BOTH WAYS (using FREEPOST) and 1 YEARS GUARANTEE.

Order MR1 Master RAM Board Installed - only £59.95
OR TD1 - Elk Turbo Driver Installed - only £39.95

PLEASE NOTE . . . if you own a PLUS 1, please send it with your Electron to be tested to ensure reliability at high speed

Acorn Electron ROMBOX PLUS

The best selling alternative to the Acorn PLUS 1

- 2 cartridge slots (PLUS 1 compatible)
- Printer Interface (PLUS 1 compatible)
- ADDITIONAL 4 ROM sockets
- FREE Electron Expansion 2.0 software fitted as standard (Normally £11.95)

Still only £54.95

JOYSTICK INTERFACE FOR ROMBOX PLUS or ACORN PLUS 1

- Uses cheap ATARI-type joysticks
- Compatible with ALL Tape and Disk systems.
- Can be used with well written games either WITH OR WITHOUT A JOYSTICK OPTION ONLY £14.95
- Requires Electron Expansion 2.0
- ... only £5 with this unit.

NEW PRODUCT

32k Sideways RAM Cartridge for ROMBOX PLUS/PLUS 1

- Ever popular on the BBC, now for the Electron
- Using Electron Expansion 2.0
- (i) Save ROM backups for loading into Sideways RAM
- (ii) Set up a 16000 byte print buffer
- Splits as 2x16k pages - VIEW AND VIEWSHEET IN ONE SLOT
- Write protect option - prevents corruption of software

ONLY £34.50

(ONLY £39.50 with Electron Expansion 2.0)

ROMBOX

- Add BBC power to your Electron
- 8 ROMs instantly selectable
- Compatible with both BBC and all Electron ROM based software
- Valuable addition to the Acorn PLUS 1 - leaves both cartridge ports free for other interfaces

ONLY £44.95

SLOGGER EPROM CARTRIDGE

- Carries TWO 8k/16k ROMs
- Compatible with PLUS1, ROMBOX PLUS and BBC Master
- Simply plugs into cartridge slot still only £12.95
- FREE if purchased with £50 of software

... Yet another NEW RELEASE

The Project Expansions USER PORT

- Hardware compatibility with the BBC
- Acorn approved design
- Operates with ANY BBC digital mouse
- Valuable extra ROM socket
- Simply plugs into ROMBOX PLUS or PLUS 1

ONLY £29.95

PRINTER

AMSTRAD DMP 2000

- Full EPSON compatibility
- Ideal for listings, Word Processing and graphics.
- Prints 105 characters per second in draft mode.
- 52 characters per second in Near Letter Quality.
- Built in 2k buffer to increase throughput.
- FREE lead suitable for ROMBOX PLUS or PLUS 1

Excellent value at only £185

TAPE TO DISK ROMS VERSION 2

- Transfer the majority of Tape programs to disk
- Acornsoft, Superior and Micropower no problem
- Compatible with programs copied using Version 1
- More successful than ever before

T2P3 for the Acorn Plus 3
T2CU for the Cumana DFS
T2P4 for AP4 and E00 DFS
T2SD for the Solidisk DFS
T2SEDFS for the SEDFS

ONLY £24.95

- Upgrade 1-2 only £5 with original ROM

SOFTWARE RELEASE

ELECTRON EXPANSION 2.0

For the ROMBOX PLUS or PLUS 1

- Simply fits into internal ROM socket
- Overcomes PLUS 1 loading errors
- PRINTER BUFFER commands for sideways RAM and MASTER RAM BOARD
- ROMSAVE/ROMLOAD commands to produce ROM "images" in sideways RAM
- JOYSTICK commands for the Slogger JOYSTICK INTERFACE
- Supports ALL standard functions (eg. Printer, ADC, RS423)

ONLY £11.95

- £5 if purchased with MASTER RAM BOARD, 32k SIDEWAYS RAM or JOYSTICK INTERFACE

Budget shoot-em-up

Program: *Uranians*

Price: £2.99

Supplier: Bug-Byte, Victory House, Leicester Place, London WC2H 7NB.

Tel: 01-439 0666

LAST month found me loudly singing the praises of Bug-Byte after I had seen Plan B, a fabulous game that has joined my personal all-time favourites.

This month sees another release, *Uranians*, and this is right at the other end of the scale. One feature I find annoying is that for part of the loading time the counter is not displayed on screen, so you can only hope that loading is taking place.

The title screen graphics are comparable with those seen in a magazine listing, but this could have been forgiven if the quality of the game had made up for it. Unfortunately, after waiting nearly six minutes while the game loads, its arrival is hardly anything to cause celebration.

You have a laser base which moves horizontally across the bottom of the screen, while the alien mothership disgorges her attack ships as she moves across the top.

The first wave of aliens weaves slowly from left to right, and although

later waves become a little more belligerent I hardly think that Earth has anything to fear.

Variety is provided by the mothership periodically dropping a firebomb which either engulfs you in a wall of flame – the best graphic effect in the game – or if you manage to avoid it, remains on screen to restrict your movement for a few seconds.

It is a sad reflection on any game when the most enjoyable part is when you get crisped. *Uranians* is a cross between *Space Invaders* and *Galaxians*, but does not have the polish of either. Nowadays we tend to expect better, even from budget games.

Sorry Bug-Byte, after Plan B this is going from the sublime to the ridicu-

lous. The only point I found in its favour was if you have a Plus 1 and Plus 3 fitted it's not necessary to disable them to load the game.

Challenging dungeon

Program: *Hunkidory*

Price: £2.99

Supplier: Bug-Byte, Victory House, Leicester Place, London WC2H 7NB.

Tel: 01-439 0666

DAVE the Dugroid is trapped in the dungeons of the planet Hunkidory. All you have to do is help him battle his way through 20 different levels to get back to the planet's surface.

This is an early program by the prolific ladders and levels game writer Peter Scott. Unlike *Last of the Free*, each level consists of a single screen – you do not wander backwards and forwards from screen to screen collecting objects.

Before you can proceed to the next level you have to collect all 10 valves that are scattered about the screen. As is usual with this type of game, your success depends on your spotting the correct route through the screen, as well as split-second timing.

Each screen is constructed from a mixture of walkways, moving platforms and sharp spikes. Whizzing

between these structural hazards are numerous alien life forms. Needless to say, contact with such creatures is always fatal.

The graphics are dated, the sprites very simple, and the backgrounds crude and boring. The screens may be a challenge to complete, but they don't have the necessary gloss to make you want to keep trying till you succeed.

One of the most infuriating features of the game is the way that everything is reset when you lose a life. No matter how close you are to completing the screen, back you go to the starting point and all the valves are replaced.

Controls are simple – left, right and jump. Stepping from the edge of the platform causes you to drop vertically, although the left and right keys can provide a controlled sideways drift.

The instructions contain a mysterious message about pressing Control + C to produce strange effects. On one occasion I tried this combination and exterminated the next alien I encountered. When attempting to reproduce this effect I hung the

machine. C'est la vie.

The top two lines of the screen are reserved for a status display. They show the level number, lives left, time remaining before your present droid expires and your score. The program has options that let you play with or without music, or run a demo routine which gives you a second glimpse at every screen you will encounter.

Hunkidory is a very average ladders game – you have been warned.

Super dungeon

Program: *Dunjunz*

Price: £2.99

Supplier: Bug-Byte, Victory House,
Leicester Place, London WC2H 7NB.
Tel: 01-439 0666

MACKSCRANE, the Great Demon, has stolen the Chalice of Binding and hidden it deep within the Dunjunz. Four fearless adventurers must risk their lives to save the chalice and the world.

This is the arcade/adventure game to top them all. It is based around a dungeons and dragons type scenario in which up to four players compete simultaneously. This is achieved by dividing the screen into four action windows, all looking into the same dungeon and each showing the progress of one particular adventurer.

This system enables groups of players to explore the dungeon as a fighting unit, protecting each other against attack by the guards, increasing their firepower when destroying objects, or even killing each other.

The adventurers come in four guises: The Ranger uses a magic bow, the Wizard is hot stuff with a fireball, the Barbarian is an axe-wielding maniac and the Warrior is a mean swordswoman. The weapons all have different attack values – the higher the value the greater the damage inflicted with each blow.

This value is increased if the adventurer locates the magic sword or a pile of weapons. Similarly each character's armour has different values: The Warrior's chain mail and shield offer great protection from most blows, but not so the Ranger's robe which is of little defence against the guards' attack.

A game such as this would not be complete without a smattering of magic, so both the Wizard and the Ranger are endowed with mystical powers. These manifest themselves in smart bomb fashion, destroying every guard on the screen when a certain key is pressed.

The Wizard expends a great deal of energy in casting such a spell, while the Ranger's energy value remains mysteriously unaffected.

As well as the obligatory treasure chests, the dungeon is littered with magical objects and keys. Keys will open doors to new areas of the dungeon, and eating food boosts your energy rating by 10 points, up to a maximum of 99.

Not all objects you discover are beneficial. For example, the dungeon is riddled with trapdoors from which

new guards appear to replace their dead comrades.

Most dangerous of all are the energy drainers, innocent-looking squares which relieve you of 20 energy points when touched and are sometimes used to bar your way to a new section of dungeon.

Drainers can be destroyed by multiple blows from a weapon but great care must be taken as they have a defence mechanism which reflects a weapon back on the attacker.

When I first played the game I was under the impression that I had to collect all the treasure on a level before I could jump through the trapdoor to level two. This is not so: if you want, you and your three comrades can exit level one in under 30 seconds. However, in doing so you would pass up the opportunity of improving weapon and armour ratings.

Dunjunz comes with 25 different levels, each loaded individually from tape as required. This may sound tedious, but each level takes only five seconds to load.

Loading occurs automatically when all surviving characters have jumped through the exit trapdoor. It is only necessary for one adventurer to survive to progress to the next level.

Once loaded, all dead characters are reincarnated with a full bill of health but with only the default values for weapons and armour. A surviving character is restored to full strength.

A save game option would have been appreciated, as you are unlikely to fight your way through all 25 levels in a single session.

Ignoring the problem of cramming four people into an area of three square feet, there is no denying that Dunjunz is a stunning piece of programming. The action is smooth and fast, and the levels tortuously difficult. This game will sell and sell.

Sinister adventure

Program: Wychwood
Price: £3.95 (mail order only)
Supplier: Larsoft, 4 Chantry Road,
 Clifton, Bristol BS8 2QD.

WHEN this adventure landed on my desk for review I was absolutely knocked out by the package's sinister graphics. I carefully read the well-written informative notes and loaded the program with anticipation. After only 20 minutes of exploration and head scratching, I was hooked.

You play the role of an ex-convict who shared a cell with a character called Jonesey. He talked in his sleep and gave you a good idea of where he hid the loot from a bank robbery.

Obviously your task is to recover the swag, stashed away near Wychwood Manor, for yourself.

As you leave your car in a quiet country lane which leads east, "the sound of birds fills the crisp air of an early autumn morning". This introductory location gives an indication of the atmospherics of the whole adventure.

You are free to move through the first few locations without encountering any real obstacles, though the pond may at first baffle you.

I was particularly taken by the various doors which require different techniques to open them. I expect you'll open the cabin door easily but the front door is rather more difficult – the trick involves a loose key, a paper clip and a newspaper. Try and work that one out! I'll also leave you to discover the secret passage for yourself.

Wychwood isn't a particularly large adventure, but each location will provide interest and material to solve the various puzzles. Try listening to the sermon in church – the reward is quite earthly.

The adventure is littered with objects which require careful examination, thought and manipulation. For instance, in the cabin I discovered a mannequin and clapperboard which had me foxed for hours.

Larsoft boasts that its games are free of bugs, non-violent, and can be solved by pure logic.

If this is an indication of things to

come I will have no hesitation in buying all of their future releases.

Not such good news

Program: Paperboy
Price: £9.95
Supplier: Elite Systems, Anchor House,
 Anchor Road, Aldridge, Walsall WS9
 8PW.
Tel: 0922 55852

PAPERBOY is a conversion of the arcade game of the same name. In your new job as local paperboy you must deliver your wares to all the regular customers, while at the same time creating as much damage as possible to the homes of non-customers.

The title screen – a highly detailed front page of a newspaper, embellished with several different typefaces – promises a graphical feast.

Press the spacebar to begin the game and you are faced with a two-colour, high-resolution stick man. Not only that, he flickers as he cycles up the street.

The game controls consist of left/right, accelerate/brake, turbo speed and throw. As play begins you are pedalling at full speed, which isn't particularly breathtaking. The only way to go faster is to press both the

accelerate and turbo keys. After a short delay you will experience a startling increase in speed – and flicker!

The delay may be due to turbo lag, but whatever the cause, it is responsible for many a tumble.

You begin your new job on the Monday. Cycling up the street you must throw a newspaper into mailboxes positioned outside some of the houses. Those without mailboxes are fair game for vandalism, so smash as many windows as possible while cycling past.

Each dirty deed is totted up as a bonus score and awarded at the end of the round. Be careful not to damage a customer's property or you'll lose every bonus point you have accrued.

So keen is your employer to improve your cycling skills he has constructed a BMX park, so at the end of each day's work you go to the park and race against the clock for bonus points.

Life is not as simple as at first appears, because footpaths and roads are alive with obstacles. You can easily come to grief by hitting dogs,

balls, workmen, radio-controlled cars, drunks and Sinclair C5s.

One annoying feature about losing a life is the fact that you are returned to the screen in turbo mode and the brakes don't work. It is not unusual to hit a second object before you have regained control of the bike.

If you feel that you need to have a copy be my guest, but please ask to see a demo before you part with your cash.

730 COLOUR 3

```

AS you know, there are eight steady and eight flashing colours in Mode 2.

Although any of these colours can be redefined using VDU 19 you can't choose the flashing combinations and you're stuck with either black/white, red/cyan, green/magenta and so on.

This utility shows how you can set up any colour combination and as an example sets colours 8 to 14 to flash red/black, green/black, yellow/black and so on.

The new colour combinations are shown in Table 1. The colours 0 to 7 are as normal.

Enter Flashers, and save

it, then run it and you'll see a demonstration. To stop the colours flashing enter:

*FX13,4

either directly from the keyboard or from within a program. You can restart them at any time with:

*FX14,4

The utility sets up an event routine which is called every time frame flyback occurs. The flash rate is stored in &70 and you can alter this by changing the 25 in line 130 or with:

?&70=&flashrate

This location is a counter and when it reaches zero

the colours are redefined using the machine code equivalent of VDU 19.

Using this technique you can now flash any colours you like. Try altering the 0 in line 530 to some other number and see what happens – the results are quite interesting.

8	White/Black

EPIC ADVENTURES THE LOST CRYSTAL

"This must be the best adventure ever for the Electron"
ELECTRON USER - MAY 1987

A full-scale GRAPHIC adventure with 400 locations

Also available: Our popular Text Adventures

THE WHEEL OF FORTUNE.. £7.95 You are transported to a fantasy world of magic and mystery. As you wander this mystical land you encounter some strange people. They may help you to find valuable treasures but don't upset them or you may not live to find the Wheel of Fortune and return to civilisation.
Voted top adventure by Electron User readers.

THE QUEST FOR THE HOLY GRAIL.. £5.95 To become a Knight of the Round Table, you must find the Holy Grail and return it to Camelot. Sounds simple, but you will have to face the deadly Black Knight, befriend the beautiful maiden, summon the mystical monk and solve a host of other problems to complete your quest.

CASTLE FRANKENSTEIN.. £5.95 The Frankenstein monster is terrorising the villagers. You have been elected to seek out and destroy him, but where do you start? Perhaps the graveyard holds some clues, or the deserted shack? Once you enter Frankenstein's castle, your adventure has only just begun.

THE KINGDOM OF KLEIN.. £5.95 The Wicked Witch of the Mountain has stolen the magic Klein Bottle from the palace. She has sworn to put a hideous curse on whoever tries to recover it. Can you discover the mystical properties of the Bottle and destroy the witch? Can you then escape from her domain alive?

The Rainbow Crystal, which has protected the people of Zaloria for many years, has been shattered into seven pieces by a mysterious bolt of lightning. Your task is to seek out the missing pieces and find a way to re-create the magical Rainbow Crystal.

Each game contains:
2 Cassettes, Instruction Book and Help Book

SPECIAL INTRODUCTORY OFFER.....ONLY

£9.95

Plus 70p Post & Package

- 400 locations, each one depicted in colourful high-resolution graphics
- Graphics and text are displayed at the same time; no need to switch between text and graphic screens
- Intelligent moving characters with whom you may communicate and interact
- Advanced language and speech interpreters capable of accepting complex commands in plain English
- Fast position-save to tape or memory
- No frustrating mazes or illogical puzzles

CUBIT

By KEN GOODACRE

MANY years ago in ancient Egypt a mighty king called Khufu was building a great pyramid – it's the kind of thing that mighty kings did in ancient Egypt as canals hadn't been invented.

Unfortunately, the workers have gone on strike and the pyramid is behind schedule.

You can help Khufu build his pyramid by filling the tops of the cubits.

Don't let Khufu's slave drivers catch you sleeping on the job or you'll be thrown in the dungeons. And be careful of inadvertently jumping off the edge.

There are two lifts that you can use on either side of the pyramid. If you jump on to one of these you'll be taken up to the top.

There are many screens, each becoming progressively more difficult. After the first three you'll find that the slave driver will change into an egg when he reaches the bottom of the pyramid and will be transmuted into a snake.

This vicious viper will follow you around the pyramid with venomous intent. If it catches you, you'll lose a life.

However, with practice you can lure the snake towards one of the lifts and if you're lucky it will jump off the pyramid as you jump on to the lift. This will earn you an extra 500 bonus points.

From the eleventh screen onwards a hole will appear in each filled cubit the snake lands on. Be careful not to drop in any of these air shafts or you'll lose a life.

After 15 screens only half the tops will be filled, and on completion of a screen you'll be credited with these and be able to start again, filling in the second half.

VARIABLES	
BX%,BY%	Slave driver's coordinates.
C%	Colour of cubes.
F%	Number of cube tops filled.
L%	Number of lives left.
SC%	Score.
sx%,sy%	Snake's coordinates.
X%,Y%	Man's coordinates.
BS	Slave driver.
QS	Man.
SS	Snake.

PROCEDURES	
move	Move man.
drv	Print driver.
sid	Print snake.
fil	Fill cubit.
mdrvr	Move slave driver.
lift	Operate the lift.
hatch	Hatch the snake.
screen	Draw screen.
cube	Draw pyramid.

```

This listing is included in this month's cassette tape offer. See order form on Page 53.

STRAIGHT down to work this month. Try running Program I, a piece of code which uses one of a new family of PLOTs to produce a yellow triangle.

```
10 REM Program I
20 MODE 1
30 GCOL 0,2
40 PLOT 4,100,100
50 PLOT 4,900,100
60 PLOT 85,450,800
```

Program I

The first three lines of the program should pose no problems. Line 10 is a labelling REM, while lines 20 and 30 select Mode 1 and tell the Electron to use yellow as the foreground colour.

The next two lines use PLOT 4 – which you'll remember as a version of MOVE – to get the graphics cursor to visit points 100,100 and 900,100 in turn. The plot then thickens as we come to line 60.

If the program had ended at line 50, all we achieve is to move the invisible cursor a couple of times and be left with a blank screen.

Line 60, however, makes a lot of difference. As soon as the micro executes it, a yellow triangle appears on the screen, the result of the PLOT 85.

PLOT 85 is one of a series of PLOTs that produce triangles filled with the current foreground graphics colour.

If you recall your geometry, you'll know that a triangle has three corners. Logically enough, PLOT 85 uses these three corners to decide where to draw the triangle.

It takes the point whose coordinates come after the PLOT, along with the previous two points that the

graphics cursor has visited.

In this case points 100,100, 900,100 and 450,800 form the corners of the triangle.

While the fact that this family of PLOTs "remembers" the previous two coordinates of the graphics cursor may seem odd at first, it soon becomes second nature.

All the triangle PLOTs, shown in Table I, use the same method. And their behaviour corresponds to

```
10 REM Program II
20 MODE 1
30 GCOL 0,2
40 PROCtriangle(85)
50 FOR delay=1 TO 300:NEXT
delay
60 PROCtriangle(87)
70 FOR delay=1 TO 300:NEXT
delay
80 PROCtriangle(85)
90 END
100 DEF PROCtriangle(code)
110 PLOT 84,100,100
120 PLOT 84,900,100
130 PLOT code,450,800
140 ENDPROC
```

Program II

the PLOT families we've explored in earlier articles.

Program II shows two of them in use, producing a triangle that appears, disappears, then appears again.

We won't go into the details of the program, it should be fairly obvious by now. PROCtriangle consists of the core of Program I with the differing values of code using PLOT 85 to draw a triangle and PLOT 87 to "erase" it.

We're not confined to absolute values for our coordinates. As before we can have relative values.

Program III uses a variant of PROCtriangle, which employs PLOTs 80 and 81 to draw the triangle. With it you can put an isocles triangle at point x,y.

Program IV has this same PROCtriangle producing a trail of triangles slanting diagonally upwards across the screen from left to right. Line 40 uses MOD to "rotate" the colours between yellow, white and

red. Can you alter the program so that the diagonal of triangles goes, the other way? A spot of palette switching using VDU19

```
10 REM Program III
20 MODE 1
30 GCOL 0,2
40 PROCtriangle(100,100)
50 END
60 DEF PROCtriangle(x,y)
70 PLOT 84,x,y
80 PLOT 80,200,0
90 PLOT 80,-100,200
100 PLOT 81,-100,-200
110 ENDPROC
```

Program III

```
10 REM Program IV
20 MODE 1
30 FOR loop=100 TO 800 STEP
100
40 GCOL 0, (loop MOD 3 + 1)
50 PROCtriangle(loop,loop)
60 NEXT loop
70 END
80 DEF PROCtriangle(x,y)
90 PLOT 84,x,y
100 PLOT 80,200,0
110 PLOT 80,-100,200
120 PLOT 81,-100,-200
130 ENDPROC
```

Program IV

code	action
80	Move relative to last point
81	Draw relative to last point
83	Draw relative in background
84	Move absolute
85	Draw absolute
87	Draw absolute in background

Table I: PLOTting triangles

Figure 1: Making a rectangle from two triangles

Figure II: An easier rectangle

```

10 REM Program VI
20 MODE 1
30 REM First triangle
40 GCOL 0,1
50 MOVE 1279,0
60 MOVE 1279,1023
70 PLOT 85,0,0
80 REM second triangle
90 GCOL 0,2
100 PLOT 85,0,1023
110 REPEAT UNTIL FALSE
    
```

Program VI

might liven things up.

This ability to draw triangles is extremely valuable. With them you can make all sorts of things, even circles. For the moment, however, we'll content ourselves with producing another important geometric form, the rectangle.

If you think about it, a rectangle can be constructed from two triangles. Program V shows how it's done.

```

10 REM Program V
20 MODE 1
30 REM First triangle
40 GCOL 0,1
50 MOVE 0,0
60 MOVE 1279,0
70 PLOT 85,1279,1023
80 REM second triangle
90 GCOL 0,2
100 MOVE 0,0
110 MOVE 0,1023
120 PLOT 85,1279,1023
130 REPEAT UNTIL FALSE
    
```

Program V

The first triangle is produced in lines 50 to 70. Here two MOVES and a PLOT 85 combine to produce the red triangle (ensured by the earlier GCOL). The program then goes on to create another triangle, this time a yellow one.

The last line is an endless loop whose sole purpose is to stop the prompt appearing. Press Escape when you've had enough.

Figure I shows how the triangles combine to form the rectangle. Of course in practice both triangles would be drawn in the same colour, producing a uniform rectangle.

Observant readers may have noticed that there are a couple of unnecessary

MOVES in the last program. Provided that we pick our points in the right order, we can do away with these, as Program VI demonstrates. Figure II illustrates the method.

Program VII, our last one

this month, uses PLOT 85 to produce two rectangles, one red, one yellow. Notice that they are created by different methods.

The first, employed in PROCfirst, uses the coordinates of one corner of the

Figure III: First rectangle definition

Figure IV: Second rectangle definition

rectangle along with its height and width to make our colourful quadrilateral.

PROCsecond also gives us a rectangle, but this time it uses the coordinates of two opposite corners. Figures III and IV show how each method works.

Once you've understood them and their differences, see if you can replace the absolute PLOTS with relative ones. Which do you think is better?

```

10 REM Program VII
20 MODE 1
30 REM red rectangle using first method
40 PROCfirst(100,100,400,200,1)
50 REM yellow rectangle using second method
60 PROCsecond(500,500,900,700,2)
70 END
80 DEF PROCfirst(xpos,ypos,width,height,colour)
90 GCOL 0,colour
100 MOVE xpos+width,ypos
110 MOVE xpos,ypos
120 PLOT 85,xpos+width,ypos+height
130 PLOT 85,xpos,ypos+height
140 ENDPROC
150 DEF PROCsecond(firstx,firsty,secondx,secondy,colour)
160 GCOL 0,colour
170 MOVE secondx,firsty
180 MOVE firstx,firsty
190 PLOT 85,secondx,secondy
200 PLOT 85,firstx,secondy
210 ENDPROC
    
```

Program VII

And that's where we'll leave it for now. Table II lists all the PLOTS so far.

Now that we've covered filled triangles you'll find that your ability to construct pictures has increased enormously. Try using them to draw boats, rockets, even the circles mentioned earlier.

● That should keep you busy until next time when we'll be leaving PLOTS and looking at other aspects of GCOL. It follows on logically.

Solid	Dotted	One dot	Triangle	action
0	16	64	80	Move relative to last point
1	17	65	81	Draw relative to last point
3	19	67	83	Draw relative in background
4	20	68	84	Move absolute
5	21	69	85	Draw absolute
7	23	71	87	Draw absolute in background

Table II: PLOTS - the story so far

More great Electron games

This month we introduce a new volume in our Ten of the Best series – 10 more games to give you many hours of fun and entertainment.

These four packages are crammed with the best games from the last two years of Electron User. As an added bonus a previously unpublished game has been added to each one – stunning machine code masterpieces from our technical wizard, Roland Waddilove.

So give yourself a treat... with the most popular games compilations we've ever produced.

ONLY
£5.95 tape
£6.95 3½" disc

Volume 1

Jam Butty: Machine code simulation of high drama on a building site.
Golf: Play a round by yourself, or play against your pals.
Haunted House: Fight against all the odds to get out alive.
Space Hike: Another classic. Help the spaceman avoid marauding monsters.
Parky's Peril: Help Parky through an invisible maze, racing against time.

Rally Driver: All the thrills of high-speed driving with none of the risks.
Alphaswap: Your letters are in a twist. Can you put them in order.
Knockout: Fast and furious action as you batter down a brick wall.
Money Maze: Avoid ghosts and collect coins in an all-action arcade classic.
Lunar Lander: The traditional computer game specially written for the Electron.

Volume 2

Atom Smash: Machine code thrills as you help to save the world from destruction.
Bunny Blitz: Go egg collecting, but keep away from proliferating rabbits.
Castles of Sand: Build castles – but beware the rising tide and hungry sandworms.
Reaction Timer: Test your reactions with this traffic lights simulation.
Solitaire: The Electron version of the age-old game

of logic and patience.
Jumper: Jump for your life in this exciting arcade action game.
Break free: Test your wits and reflexes in this popular classic ball game.
Code breaker: Crack the code in a colourful if frustrating brainteaser.
Parachute: Save the plunging sky divers from a watery end.
Star fighter: Attack the bandit ships in this fast-moving 3D punch up.

Volume 3

Rockfall: Come diamond mining in this fun packed game with its own screen designer.
Karate Warrior: Win your black belt in this gruelling test of karate skill.
Grand Prix: Battle your way into the lead in this tricky racing simulation.
Invasion Force: Can you survive wave after wave of relentlessly advancing aliens.
Grebit: Guide the frog across the busy road then across the fast-flowing river!

Fruit Worm: Steer the worm towards the fruit while avoiding rocks and its ever-growing tail.
Manic Mole: Watch out for melting platforms and conveyor belts in your quest for jewels.
Skramble: Fly your fighter fast and low over the landscape to penetrate enemy territory.
Mr. Freeze: You'll need speed and strategy to reach the ice blocks before they melt away.
Paint Roller: Steer a speeding roller, run over paint pots but keep clear of the rocks.

Volume 4

Lunar Invasion: Defend the moon from wave after wave of marauding aliens in this superb multi-screen arcade game.
Howzat: Try not to get caught out in this vivid recreation of a day's test cricket.
Snapdragon: Enjoy this two-player micro version of the familiar card game.
Day at the Races: Fancy a flutter? You can bet your shirt in safety in this two-player horse racing game.
Reversal: Combine cunning and chance as you try to out-think your Electron at this classic

board game.
Fishing: Relax and enjoy a quiet afternoon by a shady brook. You'll regret if you let this one get away.
Cavern Capers: Escape from the depths of the planet by blasting oil drums and dodging deadly fireballs.
Craal: Escape from the maze and win the beautiful princess in this superb text adventure.
Oxo: High strategy meets low cunning in a logic game to strain your brain.
Missile Attack: Defend your city from a missile invasion and save it from certain doom.

TO ORDER TURN TO THE FORM ON PAGE 53

Micros that think!

ROLAND WADDILOVE takes a first look at Lisp, the language used in artificial intelligence work

AFTER spending three months looking at View it's now time to move on to something completely different – the programming language Lisp.

This is available on tape or rom cartridge and the price has now fallen to just a few pounds for the tape version. It is inexpensive and widely available, so we'll see what it is and what it can be used for.

Unfortunately, Lisp is an unusual language and operates in a completely different manner from BBC Basic. It uses strange symbols and concepts, making it appear difficult to learn.

This isn't so and I hope to show how easy it can be by developing some simple Lisp programs and by exploring its commands and syntax.

I can't possibly cover the whole language in just a few short articles. What I intend to do is provide enough groundwork so that you can tackle the manual with confidence. (The manual – Lisp on the BBC Microcomputer by Norman and Cattell published by Acornsoft – isn't packaged with the tape or cartridge and must be bought separately).

I'm going to assume that you've either plugged in your rom cartridge or loaded the tape version of Lisp. This isn't necessary, but it will help if you try the examples as we progress.

Lisp has been around at least 20 years, and was invented by John McCarthy. It is one of the oldest com-

puter languages and has been used for many projects such as writing compilers, editors and operating systems. But it's perhaps best known as the language used in artificial intelligence work.

Expert systems, computer reasoning and learning have all been implemented using Lisp.

It's not a great number cruncher, though it is possible to write excellent maths packages. It is a LIST Processing language and is designed to manipulate lists and symbols making it ideal for artificial intelligence work. Languages like English and French consist of symbols which we manipulate into lists.

We'll be using lists right from the start as they are the fundamental structure of Lisp but, before we look at lists we must first look at atoms. This is an atom:

ATOM

and so are these:

Apples
bananas
X
Y

An atom is a string of characters beginning with a letter. However, you can also have numeric atoms consisting entirely of digits:

1
5378
89

Is this an atom?

(ATOM)

No, it's a list. You can tell it's a list because of the brackets – it's an atom enclosed within brackets. These are also lists:

(eggs and bacon)
(jim)
(Acorn Electron)
(1 2 3 4 5)
(Learning Lisp is easy)

So, a list consists of one or more atoms enclosed within brackets. Just to confuse matters, lists can also be made up of other lists or any combination of lists and atoms:

((Fred Jim) and Sheila)

The first member of this list is the list (Fred Jim) – you can tell it's a list because of the brackets, and this list is made up of the atoms Fred and Jim. The rest of the original list consists of the atoms and and Sheila.

This is a list made up entirely of lists:

((1 2) (3 4))

It has two members – the lists (1 2) and (3 4) which also have two members each – 1,2 and 3,4.

Lists can be nested to any level:

((cream cakes) and (ras berry (flavoured jelly)))

The first item of this list is ((cream cakes) and this is made up of the list (cream) and the atom cakes. The list (cream) has one item, the atom cream.

Lists need not contain any items at all and () is a NULL

From Page 29

or empty list and:

```
(()) () ()
```

is a list with three items – the NULL lists `()`, `()` and `()`.

Lisp uses the function CAR to indicate the first item of a list so, the CAR of:

```
(eggs and bacon)
```

is the atom *eggs* and the CAR of:

```
((cheese on) toast)
```

is the list *(cheese on)* – because this is the first item of the list.

CAR is a built-in Lisp function which expects a list as its argument and which returns the first item in this list. You can probably guess what the result of this Lisp program is:

```
(CAR '(bacon butties))
```

it is of course, the atom *bacon*. CAR means "What is the first item of the following list?".

This is a Lisp S-Expression – a syntactically correct expression. In other words, if you type it in Lisp

will understand what you mean, work out and print the result.

Try typing this in after the 'Evaluate:' Lisp prompt. Don't forget the tick or single quote in front of the list *(bacon butties)*. This is vital as it instructs Lisp to take what follows literally,

that is, the characters *bacon* and *butties*.

Can you work out the result of these S-Expressions?

```
(CAR '(Acorn Electron))
(CAR '((Fred and) Jim))
```

The first is the atom *Acorn* and the second is the list *(Fred and)*. Try entering them into Lisp and check that these results are actually printed.

Lisp has a similar command to CAR called CDR and this removes the first item of the list like CAR but, gives you what's left. For instance, the CDR of:

```
(this is easy)
```

is the list *(is easy)* and the CDR of:

```
((Lisp lists)(are fun))
```

is the list *(are fun)*

Try entering the following S-Expressions into Lisp and check that the result is as you would predict:

```
(CDR '(baked beans))
```

is the list *(beans)* and:

```
(CDR '((1)(2)(3)(4)))
```

The Lisp cartridge, and the manual by Norman and Cattell

```
Acorn Electron &
RCP 177B DFS
LISP
```

```
Evaluate : (CAR '(bacon butties))
Value is : bacon
Evaluate : (CAR '((Fred and) Jim))
Value is : (Fred and)
Evaluate : (CDR '(baked beans))
Value is : (beans)
Evaluate : (CDR '((1)(2)(3)(4)))
Value is : ((2) (3) (4))
Evaluate : (CONS 'jam '(and bread))
Value is : (jam and bread)
Evaluate : _
```

is the list *((2)(3)(4))*. Notice that CDR Always gives you a new list.

As you may have guessed, Lisp has a way of building lists. CONS is a function which takes two arguments – an atom and a list. It CONStructs a new list and makes the atom the first item. For instance:

```
(CONS 'jam '(and bread))
```

results in the list *(jam and bread)* and:

```
(CONS 'sugar '(butties
(are nice) to eat))
```

is the list *(sugar butties (are nice) to eat)*.

Try CONStructing your own lists and work out the CAR and CDR parts. Don't forget the tick before all atoms and lists – this tells Lisp to accept what follows as literal and not to try to evaluate it. In other words:

```
'(fish and chips)
```

means simply *(fish and chips)*!

● That's all for now. There is plenty here to keep you occupied till next month when we'll start defining our own variables.

Figure 1: Using CAR, CDR and CONS

Help Harry serve

IN this educational program designed to improve your mental arithmetic you are cast in the role of an assistant on a busy greengrocer's stall.

After a hectic morning serving customers you are worn out and very hungry. It's five to twelve and nearly time for your lunch break.

Fortunately, your mother lives just around the corner from the stall so you ring her up and ask her to bring you something to eat.

Five minutes later your mother arrives with a large hamburger – just what you need to keep you going till

tea. Unfortunately, there is a large queue of customers waiting to be served and you can't have your lunch break until they have been attended to.

So you must work as fast as possible and clear the queue before eating your hamburger.

The customers will pick their own vegetables or fruit and hand you their money. What you must do is take it and give them the correct change.

For instance, if Mrs Brown wants two bananas which are 10 pence each and she hands you 50p you

must give her 30p change.

If you give them too little they'll be upset, but you'll have another chance to give the correct change. Be careful not to give too much – some dishonest customers may take the money without saying anything and the greengrocer will be very angry if he finds out, and you'll get the sack.

As your arithmetic improves the program becomes progressively harder.

The better you become the faster the customers will join the queue, and the higher levels will provide a challenging game.

VARIABLES

n%	Number of names.
n\$()	Customers' names.
f\$()	Names of the fruit.
p%()	Price of each fruit.
q%	Length of the queue.

PROCEDURES

assemble	Assembles the machine code.
error	Error trap.
big	Double height text.
tune	Plays the tune.
person	Draws a customer.

Full listing starts

the hungry hordes!

HUNGRY HARRY Level 5

Ms Donalds wants
2 Bananas

1 Banana costs 15p

She gives you 60p

How much change do
you give her?

By ANDREW and
STEPHEN WEIR

FRENCH **on the** **RUN!**

The most adventurous and original way
to test your French ever devised.

**The adventure game
with a big difference.**

**£9.95
cassette**

**You're on
your own in
Occupied
France —
facing the
toughest test
that a British
pilot has
ever had to
experience!**

The year is 1943. As an RAF officer stranded in Occupied France you have one aim — to get back to Britain.

The only way to do this is to try to pass as a Frenchman, but if your French isn't good enough you risk capture and interrogation by the police or even the Gestapo.

Even the simplest tasks — from buying food to taking buses — place you at risk. And to add to your problems you've got limited funds: "Should I hitch a lift or take the train?", "Do I sell my belongings or get a job?"

Whatever you decide to do, time is short. And there are always people willing to denounce you...

French on the Run is that rare combination: A truly educational program that's also a thoroughly enjoyable game. This text adventure not only tests your grammar and vocabulary, but your knowledge of France and the French way of life.

And as your French improves the language problems get harder and the situations become progressively more dangerous. There are four routes to complete in sequence — you need the password from the last before attempting the next. The standard of French required is about O level, though on the last route it rises to just below A level.

**And there's a chance for you to try out the French you'll learn in practice:
We are offering a FREE WEEKEND IN PARIS as a prize to the first person to
get back to England alive, having broken a code near the end of the final route.**

For teachers: French on the Run uses multi-choice questions with randomised distractors, all carefully chosen to illustrate linguistic points or points concerning things French. The program is meant for individual assessment, but can be used just as effectively for classroom work. A sealed envelope contains details of how the secret passwords are created.

Keep your memories fresh

ROLAND WADDILOVE finds that there is something that's better than sideways ram

FOR some time now Advanced Computer Products has had a sideways ram cartridge on the market and it has proved an extremely useful addition to my Electron/Plus 3/Plus 1 system. In fact I didn't think I could manage without it.

But it has now been relegated to the bottom draw of my desk and is no longer used. Its place has been taken by ACP's latest product – Advanced Battery Backed Ram (ABBR).

An enhanced version of the original ram cartridge, it now sports 32k of ram in two 16k blocks – and is battery backed to boot.

One of the bugbears of ordinary sideways ram is that when you switch off the micro you lose everything stored there. The battery in the ABBR cartridge ensures that what you place in the

ram stays there permanently. Well, that's not quite true – it stays there until you overwrite it with something else.

The battery is rechargeable and automatically charges itself up whenever you're using the micro, so it's always in tip top condition.

The cartridge also comes with a set of utilities to enable you to use the ram as a printer buffer and load, save and create your own roms. These utilities are the same as those found in ACP's Advanced Rom Manager reviewed in the December 1986 issue of *Electron User*.

ROMLOAD and ROMSAVE load and save rom images. APB uses one 16k block to extend the Electron's printer buffer, MAKE-ROM will create a rom from

one or more Basic or machine code programs and LOCK and UNLOCK set the write protect switch – some roms are protected and try to write to themselves, corrupting the code.

A word of warning here: The utilities are stored in the sideways ram cartridge and they must be saved before you use it. This isn't made quite clear enough in the accompanying manual and unfortunately if you load a rom you'll wipe them out. So, save them first.

If you're not sure exactly what you can and can't do with sideways ram take a look at the February 1986 issue of *Electron User* where you'll find a four page feature dealing with this subject.

One of the most common problems experienced by Plus 1 owners is a lack of cartridge sockets. Many Electron owners have upgraded to discs and have either the Cumana or Plus 4 disc interfaces. These plug into one of the Plus 1's cartridge sockets leaving only one free.

This makes it very awkward if you regularly use two cartridges, say View

and Viewsheet. To go from one to the other you have to switch off the Electron, unplug one cartridge, plug the other in and switch back on.

However, there is a way round the problem. You can plug in a cartridge, store the rom on disc using a utility and then unplug it. Now if you load the rom image into sideways ram the Electron thinks you've plugged the cartridge back in.

ABBR contains 32k of ram and you can load one rom into the first 16k block of ram and another into the second 16k. The Electron will think that you've got three cartridge slots – two in one.

What is more, the battery ensures that the information you store there stays put when you switch off, so it's like having two cartridges permanently plugged into one socket.

I must emphasize that the ram is not part of the main memory map and can't be used for programs. It occupies the same address space as a rom, that is, &8000 to &BFFF and can only be used as a rom, printer buffer or ram disc.

Machine code programmers will find many uses for sideways ram as it is easily accessed from machine code. You can use it to store data used by programs, text for word processors, utilities and graphics screens.

Sideways ram is essential for writing your own rom software and it's not as difficult as you might think. To give an example of what can

Devise your own Repton screens ... and baffle your friends!

First there was Repton, voted Game of the Year in 1985. Then came the universally acclaimed Repton 2 with a whole set of new challenges. Now comes Repton 3 – all the fun of the first two games but with even more appeal!

Not only are there 24 screens with a host of brand new challenges, there is also a feature-packed screen designer.

Now you can devise your own fiendish screens for your family and friends to solve. Position timebombs, sprinkle the growing fungus, and set devious puzzles of rocks and diamonds. Then you can save your masterpiece to cassette or disc.

It's certainly a game which will keep you entertained for months! You can buy Repton 3 from us and **SAVE £2** on the normal selling price.

Or you can take out a subscription and **SAVE a massive £5**.

Design a screen then playtest it

You can even change the characters

Hardware review

From Page 37

be achieved with just a few lines of code take a look at the listing accompanying this review.

Run this program to create and store a rom image on disc. Now load it into sideways ram with ASR or ROMLOAD (two utilities provided by ACP with their ram cartridges) and a IBoot rom is created.

Now whenever you switch on your Electron the disc drive will start up and wait for you to insert a disc. Place one in the drive and your micro will automatically *EXEC the IBoot file.

This file can be used to configure the Electron, setting the colours, keyboard repeat rate, mode and so on, CHAIN a menu, load a rom into sideways ram or simply run your favourite game – it's up to you.

You may find when writing your own rom soft-

ware that your micro will lock up if you make an error or typing slip in the machine code. Since the ram is battery backed it isn't wiped when you switch off your Electron, so the micro will lock up every time you switch on.

However, the solution is quite simple: Switch off, unplug the cartridge, switch on and plug it back in with the power on. This won't damage it, but the contents of the ram will be ignored by the Electron. Now you can correct the error by overwriting the contents.

Finally, an added bonus is that you can use the cartridge in a BBC Master, so if you have friends with Masters or if you intend upgrading at any time simply unplug the cartridge from your Electron and plug it into the Master.

The contents of the ram will be preserved thanks to the battery.

To sum up then: It's a superb add-on and an absolute must for all serious Electron users. There's only one thing better than sideways ram – and that's battery backed sideways ram!

JOYSTICKS—THE COMPLETE SOLUTION

DELTA 38 SINGLE-BBC B or ELECTRON PLUS 1

£12.95

A single joystick that in some ways can act as two. The custom made special "low noise" potentiometers are wired so that it will work as a left hand or right hand joystick. It can even run some programs written for two joysticks and has the fire buttons of both.

DELTA 38 TWIN-BBC B or ELECTRON PLUS 1

£19.95

A direct but improved alternative for the original ACORN joysticks, with 2 joysticks wired to one plug. As with all our joysticks they have the fast action sprung to centre return of the steel shafted nylon covered joystick. The light action makes them ideal to hold and the 3 fire buttons allow left or right-handed use.

DELTA 35 SINGLE-MASTER COMPACT or ELECTRON FIRST BYTE INTERFACE

£12.95

The same light, hand-held, fast, light action of a 38 but fitted with switches for use with a switched joystick interface, such as a First Byte.

FIRST BYTE INTERFACE

£19.95

SPECIAL OFFER

£29.95

Buy a DELTA 35 and a FIRST BYTE INTERFACE together for £29.95

NEW III DELTA 350 SINGLE-MASTER COMPACT or ELECTRON FIRST BYTE INTERFACE

£19.95

Optical Feed Back. The joystick is fitted with 5 coloured lights to show you exactly when a switch has operated, so you need only move the joystick a minimum amount, and can be certain that you have given a true diagonal signal to the computer.

BACK TO BASICS

Part 10 of
TREVOR ROBERTS'
down-to-earth series

Going round in circles

AFTER last month, FOR...NEXT loops should cause you no difficulties. As you'll remember they take the form:

```
FOR control variable = start TO finish  
body of loop  
NEXT control variable
```

The control variable is a numeric variable that takes values ranging from *start* to *finish*. Initially having the value *start* this control variable is automatically increased by one for each cycle through the loop. This continues until the value held in the control variable exceeds the value in *finish*.

For each cycle of the loop the Electron performs the body of the loop, the Basic statements sandwiched between the FOR and its corresponding NEXT. In case that seems complicated, have a look at Program I which shows a FOR...NEXT loop in action.

```
10 REM Program I  
20 total=0  
30 FOR loop=1 TO 5  
40 INPUT "Give me a number " number  
50 total=total+number  
60 NEXT loop  
70 PRINT "The total is ";total
```

Here the loop control variable is the aptly named *loop*. This is to take values from 1 to 5, starting at 1 and going up in ones to 5. Each time the loop cycles lines 40 and 50, the body of the loop, are performed. Only when *loop* is 6 does the program drop out of the loop and go on to the statement after the NEXT.

The result of this is that five numbers are given to the program which obligingly prints their total. Try doing this without the FOR...NEXT loop and you'll see how useful a construction it is.

FOR...NEXTs for a change

IF you think that Program II is almost exactly the same as Program I, full marks! It is, apart from the REM and one number in line 30.

Yet, for all the similarity, the actual job the program does has changed vastly. Instead of asking for and giving the sum of five numbers as before, it now requests eight. This is because we've changed the range of the control variable, *loop*. If you look at line 30 you'll see that the finish value of *loop* is set to 8. Hence the eight cycles of the loop.

```
10 REM Program II  
20 total=0  
30 FOR loop=1 TO 8  
40 INPUT "Give me a number " number  
50 total=total+number  
60 NEXT loop  
70 PRINT "The total is ";total
```

Notice how flexible this makes things. It would be just as

easy to add 50 or 100 numbers by changing line 30 to:

```
30 FOR loop=1 TO 50  
30 FOR loop=1 TO 100
```

It's such a simple change but look at the effect on the program.

It also makes producing our lines of asterisks much easier. Try deleting lines 40 and 50 and add lines:

```
45 PRINT "*";  
70 PRINT
```

You'll find that now it's simplicity itself to produce a line of asterisks as long as you like. (Well almost. What's the limit? Try it and see.)

From this you should see that using FOR...NEXT loops gives us a powerful yet flexible way of getting our programs to perform a task over and over again.

FOR shortening

IN essence, Program III isn't all that different from our previous programs. Obviously the loop control variable is called *counter* and it only takes values from 1 to 3. The loop will cycle three times and the code inside it now does a multiplication instead of an addition. Because of this *total* now starts off with the value 1 instead of 0 as before.

```
10 REM Program III
20 total=1
30 FOR counter=1 TO 3
40 INPUT "Give me a number " number
50 total=total*number
60 NEXT
70 PRINT "The result is ";total
```

There's one other alteration that keen-eyed readers may have spotted. Look at the NEXT of line 60. That's all there is, a NEXT. There's no control variable with it. Beforehand whenever we've had a NEXT, there's been a control variable next to it. Hence a loop controlled by *loop* had its end marked by:

NEXT *loop*

One governed by *control* had the limit of the body of the loop shown by:

NEXT *control*

Yet in Program III it isn't there and the program works perfectly well without it.

This is as it should be. You don't have to put the control variable next to the NEXT. However, I'd advise you to put it there. It makes life much easier when we get to things liked nested loops. You might save yourself a bit of typing by leaving it out but it's not really worth it.

You can also save time at the keyboard by using abbreviations instead of Basic keywords. For example the NEXT of line 60 could be reduced to N. and P. can replace PRINT. While this can save time, for the moment I'd advise you to stick to the full keywords. A little time spent on extra typing can save a lot of time figuring out what's happened when things go wrong.

Loop inside the loop

A GLANCE at Program IV shows that it holds no real surprises. The FOR...NEXT loop that drives the program cycles 5 times and is controlled by the variable *loop*. A numeric variable *total* is used to keep a running total. So far so good.

```
10 REM Program IV
20 total=0
30 FOR loop=1 TO 5
40 total=total+loop
50 NEXT loop
60 PRINT "The total is ";total
```

But what is the program totalling? It doesn't request any numbers as before.

A look at the body of the loop, line 40, shows that each time round the loop, *loop* is added to *total*. In other words, the current value of the loop control variable for that cycle of the loop is added to the running total.

We haven't come across this method of using the control variable inside the loop before. Employing it we can get the micro to do all sorts of calculations. In the above case the FOR ... NEXT loop added the numbers from 1 to 5. It could just as easily add from 1 to 50 or 1 to 100. All it needs is a little change to the final value for *loop* prescribed in line 30.

You can even get FOR ... NEXT loops to do your "times tables". Just get rid of line 60 and add the lines:

```
30 FOR loop=1 TO 12
40 PRINT loop*2
```

for the "two times" table.

The start and finish

ALL our FOR...NEXT loops so far have had 1 as the start value of the loop control variable. This doesn't have to be the case as you'll see if you look at Program V.

```
10 REM Program V
20 FOR loop=2 TO 7
30 PRINT loop
40 NEXT loop
```

Here the control variable *loop* is told to start with the value 2. It's then incremented by 1 for each cycle of the loop which just prints out the value of *loop*. The program stops when *loop* attains the value 8.

Can you tell how many times the loop will cycle just by looking at line 20? Run the program and see if you're right, then try other lines such as:

```
20 FOR loop=0 TO 3
```

or

```
20 FOR loop=-3 TO 5
```

and see what happens. And that's all for this time. We'll go over more loops next month.

FINISH

$$1 \times 2 \times 3 = 6$$

*This could be your last chance
to build up a library of fun and
knowledge from our back issues!*

Programs from Electron User – on tape £3.95 each!

June 1987

Hungry Harry Brush up on your mental arithmetic with this educational game. **Cubit** Paint the pyramid in this fast multi-screen arcade classic. **Flashers** Create eight new Mode 2 flashing colours. **Patience** Try your hand at this classic card game. **10 LINERS** Two short, yet most impressive listings. **Dragon Curve** A graphic demonstration of recursion.

May 1987

HECTIC HENRY Escape from the maze and collect the gems in this super arcade game. **SPELLING CHECKER** Check the spelling in your View files. **MANDELBROT** Explore the amazing world of fractal geometry. **DISC MENU** A super utility to organise your DFS and ADFS discs. **ANIMALS** A fun educational game featuring artificial intelligence. **10 LINERS** Two short, yet impressive listings.

April 1987

DRAGON'S DOOM A fun educational game for youngsters learning to tell the time. **GRIDDER** A fascinating puzzle that will strain your brain. **WIMPS** A complete desktop environment with windows, icons, menus and pointers. **10 LINERS** Two short, yet impressive listings.

March 1987

SUPER BOSS Try for the league and FA cups in this exciting football management simulation. **AWARI** A classic African board game for one or two players. **ELKZAP** Recover lost files with this powerful Plus 4 disc editor. **10 LINERS** Two short, yet impressive listings.

February 1987

MAZE Escape from the creepy castle. **KEYBOARD PLAYER** Turn your micro into an electronic organ. **TOMMY** Guide little Tommy through the woods. **CARPET** An impressive graphics display. **GCOL** Experiment with extra colours. **10 LINERS** Two short but impressive listings.

January 1987

GRID WARRIOR Battle with alien

gladiators deep in space. **MODE 7 A** Mode 7 simulator providing teletext graphics. **SMILEY HUNT** The final version of AI's scintillating magagame. **10 LINERS** Zap the alien intruder and dodge the asteroids. **LISTER** A utility to enable you to list programs directly from disc or tape.

December 1986

SANTA'S SLEIGH Help Father Christmas fill his sleigh with presents in this fast arcade game. **YULE SPELL** Spelling can be fun with this seasonal variation on the old favourite hangman. **POGO** A Logo turtle graphics compiler. **FUNCTION KEY LISTER** Keep track of your function key definitions with this helpful utility. **10 LINERS** Two short but impressive graphics demonstrations.

November 1986

TRAIN TROUBLE You've just robbed a bank. Can you escape the forces of law and order in this chase over the carriages of a fast moving express? **DAY AT THE RACES** You can gamble away to your heart's content in safety with our entertaining two player horse racing game. **BASIC COMPILER** This superb utility will turn your Basic programs to machine code in no time at all. **10 LINERS** A routine from our fascinating series of short programs.

October 1986

RAT CATCHER Try your hand at pest control with this fast action arcade game. **MATHS RUN** Put your powers of mental arithmetic to the test with this educational program. **BOS** This on screen editor will take the tedium out of debugging listings and sort out your typing slips. **CROSSWORD** Two programs for crossword lovers – one to design crosswords and the other to help you solve them. + **BONUS game:** **QUASIMODO'S QUEST** Rescue Esmeralda in this colourful version of the all time favourite.

September 1986

CAVERN CAPERS Blast your way from the depths of the labyrinth to escape from the planet. **DRAW WRITER** A superb utility to translate your on screen

graphics to the procedures to create them. **COMPANY COUNT** Work your way up the company pecking order in this educational maths test. **TEN LINERS** Another short but fascinating program. + **BONUS game:** **ROCKFALL** Go diamond mining in this intriguing multi-screen arcade romp.

August 1986

HOWZAT! A vivid recreation of a day's test cricket for two players. **3D MAZE** Quick reactions and a sense of direction are needed to escape from our twisty maze. **TEXTED** Let this versatile text editor turn your micro into an electronic typewriter. **DRIVER** A powerful printer driver for View.

July 1986

ROYAL WEDDING Celebrate the royal event with our ingenious sliding block puzzle. **SNAPDRAGON** Two player version of the classic card game. **ATTRIBUTES** Colourful two player strategy game. **FORMATTER** Make your listings easier to read. **DISCS** Extended star commands. **EXTRA COMMANDS** A WHILE ... WEND command for your micro. **PLUS** superb digitised picture of Andrew and Sarah.

June 1986

FISHING Enjoy a quiet day by the river, and maybe catch your tea as well! **TACTICAL PURSUIT** A two player strategy game played with pawns on a chess board. **MINIBASE** Create an electronic telephone directory. **EXTRA COMMANDS** Add more commands to Basic. **SCREEN DUMP** Multi-tone screens dumps for Epson compatible printers.

May 1986

MISSILE JAMMER Defend the city of Pezina from a missile invasion. **VECTOR LETTERS** Use *LINE to create double height text. **DEGREES** Convert from Centigrade to Fahrenheit and vice-versa. **CROCODILE TEARS** Spell well or end up as a crocodile's dinner. **ZAP** Blast the marauding aliens. **EXTRA COMMANDS** Adding new keywords to Basic.

To order, use the
form on Page 53

THIS is an Electron version of that classic card game Patience. Converting it to run on a micro doesn't make it any easier, and it is just as frustrating as it's always been.

Most of you will already be quite familiar with the rules, but there are several variations, so here is a brief outline of this version.

When you run the program you will see seven columns of cards labelled A to G. These are face down except for the bottom ones.

Additionally there are four stacks, initially empty, and a pile of cards below them. The pile is face down except for the top card.

The aim is to finish with four columns of cards, each alternating between black and red, from a king at the top down to an ace.

A card or run of face-up cards can be moved from one column to another providing that the destination card is of the opposite colour and one higher.

For instance, you could put the five of spades on the six of diamonds or the queen of hearts on the king of clubs.

Figure 1 is a picture of a game in progress and shows what I mean.

If a column becomes empty you can place any card there, though it's best to lay the kings out first.

When a card or run is moved the top face-down card is turned over.

Any aces can be moved to the stack, followed by the twos, threes and so on of the same suit. They can be moved back to a column at any time.

Eventually you won't be able to make any more moves. In fact, sometimes you won't even be able to make one when you start.

In these circumstances you turn over the cards in the pile.

The top, face-up one can be placed on any of the columns, or the stack if it will go. If it won't, continue turning over the cards on the pile.

Hopefully you'll be able to transfer all the cards from the pile to the columns and arrange them in the required order.

If you are still unsure

Figure 1: The game in progress

Have a little Patience..

By PAUL HODGKINSON

CONTROLS

- N Turn over the next card on the pile.
- Q End the game.
- A-G Select a column to move from or to.
- S Move a card from or to the stack.
- P Move a card from the pile.

PROCEDURES

- rem Move a card from a column.
- next Turn over the next card on the pile.
- card Draw a card.
- setup Shuffle the cards.
- blank Draw a blank card.
- dbl Print double-height text.
- gtpl Get a card from the pile.

Full listing starts on Page 45

about what you can and can't do – experiment. The program is quite user-friendly and won't allow illegal moves.

If you hear a beep when making a move it means that it isn't allowed.

The columns are labelled A to G, the pile is P and the stack is S. To move a card from one place to another press the source letter followed by the destination.

For instance, to move a card from the pile to column E, press P followed by E. And to see the next card on the pile press N.

There is one final command that you'll need to remember and that's Q to quit.

Use this when you're stuck and can't go any further. You then have the option to try again.

XOR

The Ultimate Maze Challenge

There are no random events in XOR's labyrinthine palace, and there is no premium on hand-eye coordination. You have all the time in the world to work out the precise nature of the hazards you encounter. Logical thinking, strategy and tactical problem solving are all part of the XOR experience. And XOR is not simply about finding solutions. If you can solve the entire puzzle (15 levels plus an encrypted anagram), you qualify to be a member of the Order of XOR. With a certificate and a badge to prove it.

"...this is one of the most compulsive, cunning and attractive programs I've seen for some time! the game is superb - a very classy original twist on the basic maze theme" A+B Computing

XOR's Features

- 15 graded mindbending mazes - each maze approximately 16 screens
- super smooth high speed scrolling
- high resolution quality graphics
- high speed or step by step replay feature
- intriguing logical problems
- interactive dynamic puzzles

XOR MAZE GENERATOR

The XOR Maze Generator is a truly professional utility, in fact it's the very same generator we used to create the first collection of XOR puzzles. The package is fully menu driven and simple to use, the user simply places any predefined icons onto the

maze screen. Included in the package is an ICON DESIGNER so that you can change the appearance of the game characters to baffle and delight your friends.

This listing is included in this month's cassette tape offer. See order form on Page 53.

There's lots in here for you, too!

The Micro User isn't just for BBC Micro owners – those clever Acorn designers have ensured that the Electron is as compatible as possible with all BBC Micro and Master models. This means that quite a high proportion of programs written for the BBC Micro will also run on the Electron.

The June issue of *The Micro User* is packed full of interesting programs, utilities and articles for all Acorn computers and is an absolute must for Electron users. Contents include:

Prof McBrolly – Pit your wits against the goblins in this exciting arcade game. (This is best played with a Slogger Turbo).

Soft-Wear – Create and print out your own knitting patterns.

North by North-West – Enjoy the farming life in this Canadian agricultural simulation.

Library – High quality routines for you to use in your own programs.

What's in a rom – Everything you ever wanted to know about a rom but were afraid to ask.

Rom Directory – An up-to-date list of all the roms currently available for the BBC Micro.

Acorn's RISC Machine – Get the low down on Acorn's new microprocessor.

Begin Here – A series aimed at the novice programmer.

Hac Man – Thunderstruck II revealed, including a full colour map.

Gallery – Featuring some of the best Micro Art around.

Plus lots of articles to keep you up to date with all the latest news, reviews, products and features.

Please send me the next 12 issues of *Micro User* for £15.

Micro Messages

Way to painless spot removal

I BOUGHT a Plus 3 disc drive about six months ago and can thoroughly recommend the ADFS and 3.5in discs. At the same time, I ordered the Acornsoft disc-based Database (which you reviewed in January 1986)

Thumbing through the manual, it seemed that Database was ideal for me, with useful search features and the ability to create View macros.

But when I loaded it for a trial run – dismay! The ever-present spotty cyan background may look good on an RGB monitor, but is very painful to view on a black and white portable.

Frustration finally got the better of me, and I resolved to do something about it. Fortunately the program is not protected and only a couple of lines need be altered to change the background throughout.

After booting the disc, escape from the main menu and enter:

```
*CAT
*ACCESS MENU WR
LOAD "MENU"
LIST 100,110

100 MODE4:VDU19,0,0,0;19,1,2;
0;
110 VDU23,255,0,0,0,0,0,0,0
SAVE "MENU"
```

This produces green text

on a black background, with no spots.

There isn't a routine included in Database to combine files – for example to combine in one new file, similar records which you have searched from various master files. I think this could be done. Has anyone worked out how to do it? – John Atkinson, Tywardreath.

● It's always good practice to experiment with backups, not your original (and valuable) discs.

Confusing filenames

LET me begin by congratulating you on your first class magazine which I consider very good value for money.

Could you please help me with two queries? Having followed the instructions laid down in the View manual to the letter I am still unable to save any material

on to tape and then retrieve it.

Every time I type in:

Read Letter 1

and press return I get a "Marker not set" error message.

I have tried everything I can think of – even using a friend's equipment, but to no avail.

My second query is about my Centronics GLP. I am unable to get it to print in any mode other than single strike although once again I have followed the instructions and even tried all the remedies suggested in the various letters to Micro Messages in past issues.

Hoping you can help. – B Mori, Woking, Surrey.

● The filename is confusing View. You must use a single word no more than 10 characters long, so "Letter 1" is wrong and will produce an error report but, "Letter" is fine.

Either use a printer driver to insert printer control codes into the text (you'll

find one in the August 1986 issue of *Electron User*) or, set up the printer from Basic before you enter View. For instance, the following codes will set condensed mode on an Epson:

VDU 2,15,3

Your GLP may require different codes so you'll have to look up the correct ones in your manual.

Joystick control

I RECENTLY bought a new Plus 1 and have found it to be ideal for my application. There is one thing troubling me. After buying Elite and trying to utilise the joystick facility I am unable to do so. Please could you explain why it is not possible. The game is on cassette.

Keep up the good work on the magazine! – S.P.J. Musitano, Newbury, Berks.

● You can't use joysticks with the Electron version of Elite – even though the instructions may say you can.

Check on memory

I HAVE a problem with Mini Office spreadsheet: After entering my requirements the program crashed with the error message "No room at...". Is there no way to find out if or when you are exceeding the memory capacity in this otherwise excellent program?

Also could you briefly explain to me how to upgrade my Electron: There are so many items on display in adverts it is all very confusing. I thought of a disc drive and cartridges.

My main interest is amateur radio and I need something with easier and

quicker access than the cassette recorder. Please advise me before I go cross-eyed and brainless looking at the adverts. – D. Mason, Wirral, Merseyside.

● Mini Office is an excellent suite of programs for the Electron. However, it was not designed to handle vast amounts of data and should only be used for small applications. You can't tell how much memory is free, so save your work at fairly frequent intervals.

If you can't fit your spreadsheet into Mini Office you would be better off with a rom-based program such

as Viewsheet. If this still isn't big enough you'll have to buy a bigger computer with a much larger memory.

There are three disc systems available for the Electron: The Plus 3 (reviewed in the March 1985 issue of *Electron User*), Cumana (July 1985) and Plus 4 (June 1986). All operate in slightly different ways and each has its own advantages and disadvantages.

We would advise you to buy whatever your friends are buying – if everyone has the same disc system you can swap programs, games and utilities.

Software galore

I THINK your magazine is excellent. I especially like *Micro Messages* and *Software Surgery*. I think you should extend the software pages.

In answer to the letter in the April 1987 issue of *Electron User* about *Ravenskull* – Superior Software's brilliant game – the scroll on the first level right down in the left hand corner by the

From Page 47

Ravenbee will open the door to which there is no key.

I refer to the place almost in the centre of the first level where there are three doors fairly near each other. Stand just outside this door, use the scroll and as quickly as possible go through the door which has now gone. The second level is very difficult too.

Recently I found a way of getting on to the next screen in another Superior game – Mr Wiz. Press Caps Lk, O and 1 all together and you will progress to the next screen. I think Superior games are excellent, and the Hits Pack 3 is superb value for money.

Could you tell me what you think is the best winter Olympic game for the Electron? I have seen Winter Events for the Commodore but I don't think you can get it for the Electron.

Also, could you tell me if you have any news about Superior bringing out a follow-up to Citadel? If not, every Electron user who thinks Citadel is one of the best games ever should write to tell them they ought to bring out Citadel 2 soon. After all, they did it with Repton!

I have heard from friends with the Commodore 64 that Konami's hits pack of four games is excellent, but I am almost certain that you cannot get them for the Electron, though I know you can get Mikie and Yie are Kung Fu. If you can't get the pack can you get any of Ping Pong, Hyper Sports or Green Beret? – **Damon Wingfield, Portsmouth, Hants.**

● Tynesoft produces an excellent winter sports simulation called Winter Olympics. This was reviewed in the June 1986 issue of Electron User. There are rumours that Superior is working on a sequel to Citadel.

Ping Pong, Hyper Sports and Green Beret are not available. Commando by Elite is the nearest thing to Green Beret, but it is rather slow and is best played using Slogger's Turbo driver.

WHAT would you like to see in future issues of Electron User?

What tips have you picked up that could help other readers?

Here is your opportunity to share your experiences.

Remember that these are the pages that you

write yourselves. So tear yourself away from your Electron keyboard and drop us a line.

The address is:

**Micro Messages
Electron User
Europa House
68 Chester Road
Hazel Grove
Stockport SK7 5NY.**

Jump facility

IN REPLY to Paul Askew's letter in the April 1987 issue of Electron User concerning the Ravenskull jump facility, here is how it is used.

Once you have completed the first level without losing a life and have then lost all three lives on the next level you can jump.

Before starting level one again press J and where it says Jump a number 2 will appear and you can start on the next level. – **Andrew Plaistow, Sandy, Beds.**

Improved spelling . . .

I WOULD like to point out some errors that, I believe, exist in your excellent View spelling checker published in the May issue of Electron User.

The program as published contains an error in line 350. This should read:

```
350 CH=GET #chan1:IF EOF #chan1  
BPUT #chan2,CH:done=TRUE:  
ENDPROC
```

This ensures that the last byte of the file, an &OD, is written to the output file. Otherwise it will not be accepted by View.

Line 530 is a little risky, since it assumes that all words ending in ing can also end in "er" and vice-versa. Similarly, not all words that end in "s" are plurals.

The method of storing just the beginning of the word in the dictionary can result in a misspelt word being accepted: If the spelling checker meets a word such as encounter, it will store encount in the dictionary. It

will then accept the words encounting and encounts as correctly spelt.

Line 530 should only test for the 's endings to words to avoid this possibility. Thus:

```
530 IF RIGHT$(W$,2)="'s' W$=L  
EFT$(W$,LEN W$-2)
```

When replacing a word that is not found, the checker does not test the word that is input against the dictionary. This allows a word to be input that is misspelt and can be avoided by changing line 580 to:

```
580 IF KX=ASC(r) INPUT Replace  
with W$,W$:GOTO 520
```

Also, it is worth noting that the document created by the checker will not be correctly justified if words are replaced.

Please continue with the more advanced articles in your magazine and thank you for an excellent read. – **T.R. Ecott, Durrington, Worthing.**

● You are right about the last byte of the file being missed. If you end the View file with a blank line or two you will never see the problem and the program will run perfectly.

Line 530 tries to reduce the size of the dictionary by chopping off common word endings. For instance, take the words hunt, hunts, hunter, hunting and Hunt's. These would require five dictionary entries consuming a total of 33 bytes of memory if stored separately.

However, by chopping off the word endings only one dictionary entry – hunt – is required taking up just five bytes (four for the letters and an extra byte to mark the end of the word). Errors

in all these words will still be detected even though there is only one entry in the dictionary.

This makes the space required by the dictionary much smaller and as an added bonus is consequently it is much faster to search as well.

The Electron is not over-blessed with memory, so Spelling Checker is a compromise between accuracy and dictionary size.

. . . improved program

I WOULD like to advise you that some errors have crept in to Spelling Checker in the May issue of Electron User. Although most program errors I have suffered in the past have been found to be due to mistakes I have made in copying them, in this case it has not been so.

In lines 100, 330, 860, 880, 920 and 960 a minus sign has been used as a separator, which is not accepted by the Electron. With these replaced by an underline character the program ran perfectly.

I also found difficulty in getting the dictionary to save, and after some time realised that name\$ entered in line 270 was confusing the issue. I changed line 270 and 280 to cname\$ and resolved my problem.

In conclusion I would like to say that I find your articles most informative and useful. I wonder if it would be possible for you to do some explanatory articles based on the Library included on the Welcome disc? Some of these programs are a bit confusing and the Help information is too vague. – **Colin Thomas, Rugby, Warks.**

● Underline characters were used in the program, but unfortunately the laser typesetting machine used to print our listings had the wrong character set loaded and all underlines came out as minus signs.

You shouldn't experience any problems loading and saving the dictionary, it sounds like you've made a typing error.

Siamese micros

THANK you for publishing the passwords and editor codes for Repton 3, they have helped me complete the game.

The other day, while using my Electron, I typed:

*HELP

and found that an RS423 port is listed. Could you please tell me how to access the port as it has no socket.

I plan to connect the Electron to my BBC B+ so I can use some rom cartridges on my BBC Micro. If this is possible could you please tell me how to make the connection and how to link the two keyboards together so they control both computers. — Geoffrey Scott, Earls Barton, Northants.

● You can't use the Plus 1's RS423 as it hasn't got one! Ignore the message on the screen.

You can link an Electron to a BBC Micro using the cassette ports or by adding an RS423 port to a Plus 1 or Rombox, but it will drastically reduce the speed of both micros and you can't control one micro from the other's keyboard.

What you need is a second processor, sideways ram or a rom board for your BBC Micro.

Making a !BOOT file

A FEW weeks ago while typing my higher engineering project into my Electron I started to wish I had a disc drive, not only for speed but also for the facility of a !BOOT file.

Each time I switched on the computer I wasted a lot of time loading the printer driver, defining the function keys and other things which could all be done by means of a !BOOT file on disc.

Remembering how to create a !BOOT file for View gave me an idea. I made a !BOOT file and saved it to tape in the usual way, then loaded it back in using *EXEC and found it to work

in the same way as a disc !BOOT file.

The file I now use is:

```
*WORD
MODE3
NEW
*FX6
*FX16
*KEY1 SHEETS:M
*KEY2 PRINT:M
*KEY3 SCREEN:M
*KEY4 FORMAT:M
*KEY5 CLEAR:M
*KEY6 REPLACE
*KEY7 *FX202:M*FX16:MNEW:MREAD
*KEY8 *FX16:MNEW:M*EXEC NEW:M
*KEY9 *CAT:M
*KEY0 SAVE:M:M
*KEY10 *FX202,48:FX16:MMODE3:
M:504000
PRINTER DMP2000
```

I have subsequently made !BOOT files for many of my other programs, all of which work perfectly.

I would be grateful if you could inform me whether the adventure The Lord of the Rings is available for the Electron as it seems to be available for all the other computers. — Ian Smith, Kinross, Tayside.

● Lord of the Rings is not available for the Electron.

Automatic loading

I HAVE an Electron, Slogger Rombox with View and Viewsheets rom cartridges and an ACP4 interface with 3.5in disc drive which I use regularly. I have decided to place all my letters and spreadsheets on a menu I have written but unfor-

tunately I have a problem.

After the choice has been selected the program will go into Mode 3 and then call View or Viewsheets with *W. or *SH. and that is as far as it will go.

I want to be able to make the desired menu selection and then get View/Viewsheets to READ or LOAD the selected file automatically from disc. Can you help? — Martin Mulburn, Middlesbrough, Cleveland.

● One way to load a file into View or Viewsheets automatically is to define a function key and insert the key number into the keyboard buffer.

For instance:

```
10 *KEY0 *WORD:LOAD Text:M
20 *FX138,0,128
```

when run will enter View and load the file called Text. Change the filename to whatever file you wish to load and insert the lines into your menu program.

Machine code listings

I HAVE been reading a book on machine code and it says the only way you can list a program is by decoding it from its memory block with a special program called a disassembler. Do you know where I could get one?

I must say I'm extremely pleased that Superior Software, has released its Volume 3 collection on disc and I hope there are many more.

My favourites in your mag

are adventures, software reviews and your excellent listings. — Robert Cundy, Weymouth, Dorset.

● You'll find a disassembler in the June 1985 issue of Electron User. Slogger's *Trek rom is an excellent disassembler which comments on the code as it disassembles it.

ACP's Advanced Disc Toolkit contains a very powerful version which will disassemble forwards, backwards, follow JMPs, JSRs and branches.

Control codes

YOUR August 1986 issue gave a good review of the Amstrad DMP 2000 printer so I bought one to help me check listings and it is indeed excellent. I am, however, a bit lost when it comes to the machine code section of your View printer driver in the same issue.

Basically I don't understand how to alter the control codes, not being that well versed in assembly language. Can you please assist by telling me exactly how to alter the program — my View cartridge refuses to print out.

Please keep up the excellent standard of Electron User and include more games with good graphics and some educational ones too. — D.Hazzard, St. Briavels Common, Nr. Lydney, Glos.

● Most of the printer driver's functions are compatible with the DMP2000 and you shouldn't have any printing problems. We can only assume that you have made a typing error. Please check your listing carefully.

The program is a printer driver generator and should be loaded and run from Basic. It creates a machine code printer driver file which can then be loaded into View.

To print a file from View enter command mode and type:

PRINT

or:

SHEETS

ALL programs printed in this issue are exact reproduction of listings taken from running programs which have been thoroughly tested.

However on the very rare occasions that mistakes may occur corrections will be published as a matter of urgency. Should you encounter error messages when you type in a program

they will almost certainly be the result of your own typing mistakes.

Unfortunately we can no longer answer personal programming queries concerning these mistakes. Of course letters about suggested errors will be investigated without delay, but any replies found necessary will only appear in the mail pages.

These are the games everyone wants to play!

Ten top games from leading software houses compiled into a double cassette package . . . no wonder it's been No1 in the Electron charts for week after week after week!

And now, for readers of Electron User, it's an even bigger bargain. We've done a special deal on your behalf that slashes the price even more!

FIVE top-selling games . . . now at an incredibly low price

Beau Jolly have put together a perfectly-balanced games package to add to your collection.

Strategy and dexterity are perfectly combined in **Repton**, one of the best games ever released for the Electron.

Deathstar is a fast-action space shoot-'em-up in the classic tradition.

Go adventuring with **Twin Kingdom Valley** (complete with 175 illustrated locations).

Take the controls of a highly-maneuvrable helicopter in the tactical game **Combat Lynx**.

Lastly there's **Geoff Capes Strong Man** with six different event for the sports enthusiast.

COULD THIS BE YOUR PROGRAM?

Is your program good enough to fill this spot?

Will your game be the next No. 1 hit?

Are you looking for **top** royalties?

Are you writing for leading computers such as Commodore 64/128, C16/Plus-4, BBC/Electron, Atari, Amstrad, MSX, Spectrum or any other 6502/Z80 Micro.

Answer YES to any of these questions and we would like to hear from you. Send your program tape or disc, together with full instructions for fast evaluation. Be sure to state your computer type, memory, peripherals used and your name, address and telephone number.

P.S. Urgently required games software for Electron and BBC

Spiral Twister

WHAT can you do in 10 lines with just one MOVE and one DRAW statement? Not a lot? Well think again as you watch this superb demonstration of animated line graphics written by Gareth Howells. The constantly moving display is almost hypnotic, and this short program demonstrates what can be achieved with a little imagination.

```

1 REM Spiral Twister      X),!(loop%+4):PRINT
2 REM By Gareth Howells  7 NEXT:UNTIL0
3 MODE 4:VDU19,1,1;0;19,0, 8 DEF PROCsetup

```

THE official disc system for the Electron is Acorn's Plus 3 and although a powerful system, it uses up more than 3.7k of your memory.

Cumana soon solved the problem with its internal memory floppy disc system, and PAGE remains set at E00. This was reviewed in *Electron User*, July 1985. So where's the problem? I hear you cry.

It's down to that age old computer hang up that we all suffer from at one time or another – compatibility.

A disc system that cannot talk to other disc systems is at a disadvantage compared to one that can.

Cumana did offer some solutions on its utilities disc, which included software to read and write other formats such as Acorn's ADFS and DFS. Which is fine just as long as you don't need to do it very often.

It also means that you can't take advantage of all of the specially written software such as disc menus, disc editors and so on, that appears in magazines and on roms from time to time.

This is precisely the sort of problem that the new SEDFS from Slogger is designed to overcome – but does it?

Designing a DFS from

DFS upgrade with BBC compatibility

MARK SMIDDY puts Slogger's SEDFS through its paces

scratch is not easy at the best of times, but trying to make it software compatible with someone else's format is another thing again. To the software or the user the DFS must appear to work in exactly the same way as the official Acorn DFS.

Putting the unit through its paces reveals that you can have the whole lot up and running in less than 15 minutes. Even for hamfisted amateurs like me, changing

the rom is not too difficult. And if you buy the complete thing it's simply a matter of plug in and go.

Switch on and if all's well the message:

Acorn Electron

Slogger EDFS

BASIC

appears, and looks very friendly too.

One quick *HELP later and the Slogger announces that it has DFS and UTILS built in and worth further inspection. Figure 1 shows the HELP screen.

It is here that the SEDFS starts to flex its muscles, adding four new and useful commands to the original Acorn list: MAP, MCOPY, RUNPROT and STAT.

*MAP and *STAT are used to discover how much disc space is available and how it is being used.

*MCOPY is similar to *COPY but it copies as many files as memory will allow, not just individual ones, between disc swaps.

*RUNPROT is concerned with Slogger's Tape to Disc Utility and makes use of the internal ram of the DFS while it is loading a program.

Looking further, requesting HELP on the UTILS (figure 11) shows four more utilities are available than on the Acorn: *DATE, *FORMAT, *FDCSTAT and *VERIFY. It's worth remembering here that because all of these utilities are built in, you don't have to go rummaging for that utilities disc that you lost months ago, just because you want to format one disc.

*FDCSTAT reveals the

"It's worth remembering that because of all these utilities are built in, you don't have to go rummaging for that utilities disc you lost months ago".

*DATE gives the current time and date held in the battery backed up ram inside the Cumana DFS.

Another nice feature is *OPT 8,255 which causes the SEDFS to automatically detect a 40 track disc in an

80 track drive and still be able to read it. In fact, SEDFS is so good that I can't easily find fault with it.

The manual is quite simply the best of the type I have seen, charged full of very useful information to suit everyone from the beginner to the professional. Early issues lacked an

index but a new one is promised very soon.

Included is a section on overlays, how to fit a 20k plus program into memory at once. This text is a delight to read and other manufacturers would do well to follow Slogger's lead in this area.

There is nothing I hate

more than buying a product only to find that I have to spend another £20 on manuals to learn how to use it.

Some readers familiar with BBC Micro history may have heard of the much maligned 8271 FDC. Software houses designed many disc loaders around the internal workings of the 8271 so any new DFS would benefit greatly from having that compatibility. Here too the SEDFS scores highly, with a virtual 100 per cent 8271 emulation to Acorn specifications.

So the SEDFS has all of the nice features that we have come to expect from Slogger. But how well does it perform as a filing system?

For the answer to that question we put it through some very tough trials. Result: Top marks right across the range, even to the extent that some of the bugs in the original Acorn DFS have been ironed out.

One of the most notable is where you have two drives, select the second drive and then try to IBOOT the disc. Acorn's DFS quite merrily returns back to the first drive and spins away waiting for a disc.

The SEDFS performed admirably throughout. Speedwise it is not very exciting, but it's no worse than any comparable DFS that I've seen and it would be unfair to benchmark test it against the Electron ADFS, except to say that it does perform very favourably.

To anyone used to the tape format, discs offer speed and reliability beyond compare. And to anyone considering upgrading to discs who needs thorough BBC compatibility the SEDFS is the logical choice.

Though I must say that given the choice and the money I think I'd tend to get the ADFS; since I haven't, the editor's going to have trouble getting this review copy back.

If you already have the old Cumana DFS I can recommend the SEDFS upgrade unreservedly. ■

Dragon's Curve...

RECURSION and fractals are two fairly common topics discussed by computer buffs these days. But what do they mean?

Well, I always try to explain complex topics pictorially, so here is a short program to draw a Dragon's Curve illustrating these two subjects.

It incorporates what I like best in graphics programming – not a lot of typing in and a complex looking result. In fact 11 lines set up the variables and 13 lines draw the curve.

This economy is achieved through the use of recursion, that is a procedure that calls itself. Let's see what happens.

Lines 240 to 290 contain a procedure called PROC_DRAW which simply draws a straight line in one of four directions up, down, left or right.

The direction depends upon the value stored in the

MIKE COOK uses one to explain two complex topics – fractals and recursion

variable D%. The length of line is given by the variable X% and it is one of the parameters you enter when the program is run.

The curve is drawn by the procedure PROC_CURVE and it is passed two parameters, S% and L%.

The first sets the length of line to draw and the second tells it whether to draw the curve or not.

The variable L% is the level of procedural calls – the level of recursion.

If it is equal to 0 a line is drawn, if it is not, a curve to the left and to the right of the current position is drawn. Note that this procedure is the one that draws the curve and will call itself twice.

Now to prevent your Electron 'calling the procedure for ever. Each time it calls itself the level variable L%, is reduced by one. Thus it will eventually reach zero and a line will be drawn.

This is our escape route, and the nested procedures can claw their way out of the hole they have just dug for themselves.

Remember that each time a procedure is invoked it is passed a fresh set of variables, hence L% shows how deep the recursion is at any time.

The depth of recursion on the Electron is limited only by the amount of free memory available, so if you try to go too deep you will get a no room error.

Also as the recursion gets deeper the curve gets larger and you will find only part of it being displayed on the screen.

Finally you can tinker with the program using a GCOL statement to change the colour or have several curves displayed around the screen.

The Dragon's Curve is a class of curves known as fractals. A fractal is a space-filling curve of infinite length but bounding a finite area.

As it is clearly impossible to draw a line of infinite length (well, you could but it would take an infinite length of time!) we can make an approximation to it of a given order. This is the level variable given at the start of the program.

If you wish to see what is happening try printing out the recursion level at the start of the procedure PROC_CURVE.

Use a TAB command so

that it is always printed in the same position, and include a small delay loop so that you will be able to see what is happening.

The peculiarity of fractal curves is that the more curve you examine the more you see the same pattern.

If you could zoom in on a section of the curve you would see the same pattern repeating.

This mirrors the way some natural events behave, and fractals have been observed in phenomena as diverse as the flood levels of the Nile and magnetic activity on the sun.

The result is that most fractals are both interesting and beautiful and because of recursion they are quite easy to program. Have fun experimenting with Dragon Curves. ■

THE DRAGON'S CURVE

WRITING SOFTWARE TO READ THE ADC

Part VI of JOE PRITCHARD's Plus 1 series

THIS month we see how we can use the analogue port from within machine code programs. We'll also take a look at events and the ADC.

This isn't intended to be a tutorial on 6502 machine code so I'm going to assume that you have a basic knowledge of assembly language.

Accessing the ADC from machine code is fairly easy and all the Basic ADVAL functions can be carried out using standard osbyte operating system calls.

The call that simulates ADVAL is osbyte 128. The A register is loaded with the osbyte call number, 128, and the X register holds a value in the range 0 to 4 – the same as the argument passed to the ADVAL function in Basic. Thus, ADVAL(3) in machine code is:

```
LDX #3
LDA #128
JSR &FFFF
```

On exit from the osbyte call, the X and Y registers hold the ADVAL value. The lower eight bits are stored in the X register and the eight most significant bits are in the Y register. The functions offered by osbyte 128 are summarised in Table 1.

FX16, 17 and 190 calls are also executed from machine code using osbyte. These translate to:

```
LDA #16
LDX #n
JSR &FFFF

LDA #17
LDX #n
JSR &FFFF

LDA #190
LDX #n
JSR &FFFF
```

ENTRY	EXIT
X=0	Y=last channel of the ADC to be converted. If no channels have completed a conversion yet then Y=0.
X=1-4	Reads channels 0 to 3 of the ADC. The result of the reading is returned in X and Y.

Table 1: Osbyte 128 functions.

As an example of the use of machine code to read the ADC, you might like to try Program 1. This simply starts a conversion, waits until it is completed, then reads the converted value back and prints the result in Basic.

We initiate a conversion with FX17 in lines 210 to 230, then wait until the ADC signals that it has finished, lines 240 to 290. Finally we read the value and store it in &70 and &71.

Programs that read the ADC from machine code won't be that much faster than Basic, simply because we still have to wait until the ADC has completed its conversion. So why do we

bother with writing programs to handle the ADC from machine code?

Well, if we write a program in which everything else is in machine code then it makes sense to read the ADC from machine code as well.

Secondly, some programming applications involving the ADC can't be done from Basic. On the Electron, these are often applications that involve events, a form of interrupt.

The operating system stops whatever it is doing every 10 milliseconds and sees whether there are any important tasks waiting to be done. For instance, it

has to read the keyboard every now and then to see if you've pressed a key and to keep the clock up to date.

So the operating system interrupts whatever it is doing at regular intervals, performs these tasks, then returns to whatever it was doing before it was interrupted.

The operating system in the Electron relies quite heavily on interrupts for many tasks, but not all are performed every time an interrupt occurs.

For instance, the flashing colours flash twice a second yet the clock ticks every 1/100th of a second. And some tasks are only dealt with as and when required.

There is even provision for you to add your own tasks to the list it must perform during an interrupt.

You can tell the operating system that it must perform your task every time a particular event occurs – say every time the clock ticks, or whenever you tap a key.

The task the operating system must perform is a short piece of machine code called an event routine – because it is executed every time a particular event occurs.

The operating system must be told which event to watch out for and where our machine code event routine is stored so it can add it to the list of tasks it must perform.

We'll see how we can use the ADC conversion complete event. This occurs whenever the ADC in the Plus 1 finishes a conversion of one of the channels. To

Program II

enable this particular event the instruction:

*FX14,3

is used. Now the operating system will execute your routine when this event occurs. To disable the event use:

*FX13,3

How does the OS know where your code is? It simply calls the routine whose address is held in the two bytes &220 and &221 – the event vector. The first byte holds the low byte of the address of the routine and the second holds the high one.

Clearly the event vector should be pointing the machine code routine before the event is enabled, otherwise, a crash could result.

The code should preserve all the registers that it uses and should also take less than two milliseconds to execute. Anything that takes longer than this could lead to problems – the Electron will slow right down to a snail's pace for a start.

In addition, it's not a good idea to use oswrch or some of the other OS routines.

For the particular event that we're interested in, the machine code is entered with the A register holding the value 3 and Y holding the number of the channel that has just finished conversion. This is set up for us by the OS.

The value in the A register indicates the type of event that has occurred. All events go through the same event vector, so if we have several events enabled at the same time we may want to know which particular one has just occurred.

In this case, with only the ADC event enabled, it doesn't really matter about the A value, and we can ignore it.

Program II gives a simple demonstration of events in action. While the value of TIME is being printed to the screen, the event routine is entered every 10 mil-

Program III

liseconds and the reading from the ADC stored in an area of memory called cache.

With a few alterations to the program it would be possible to get it to store say, only one reading per second or minute and so allow you to take readings of a slowly altering value while doing other things with the micro.

Of course, you would have to take care that the cache area of memory was big enough to store all the readings and that your other programs didn't overwrite the event handling routine or the stored readings.

As for the program itself, initialise sets up the event vector, stores the address of cache in page zero, enables the event with a call to osbyte 14, then turns off all ADC channels except channel 0 with a call to osbyte 16.

From this time on until the event is disabled the event routine is entered every 10 milliseconds. Locations &70 and &71 hold the address at which the next reading is to be stored and are updated after every reading.

Program III is a further example of event program-

ming and should give those of you who built the games paddle in April 1987 issue of *Electron User* a few ideas for software.

The conversion complete event is used to allow inputs to the analogue port to simulate presses on the keyboard. As it stands, readings on channel 0 are taken as a Z if the reading is greater than 32765 and as an X if it is less.

Once the event is enabled either X or Z will be inserted into the keyboard buffer every 10 milliseconds – this will rapidly fill up the keyboard buffer as you'll see if you run the program.

These keypresses will be picked up by GET or INKEY like any other keypress, so you could add this facility to your own programs.

You might like to add a few lines to read the PB inputs, or give a dead area in the middle of the ADC output range, perhaps between 15000 and 45000, where no keypress is returned.

● That's all for now. Next time we'll take a look at *Advanced Computer Product's Plus 5* and see what we can do with it.

Ravenskull Castle — The Fortress of Doom

Your task is to save the village of Austburg from imminent devastation. You must enter Ravenskull Castle and retrieve the silver crucifix which the evil Baron Strieg has stolen. Only then will Austburg be safe from the Zombies who inhabit the swamp surrounding the medieval castle.

Ravenskull is a massive arcade-adventure featuring smooth 4-way screen scrolling over the 4 levels of play. Each level is 64 times the size of the screen, and there is an initially-bewildering variety of game characters including: acid pools, man-eating plants, time-doors, keys, pick-axes, scythes, spades, bows and arrows, dynamite, bells, food and wine (beware! it may be poisonous or have strange side-effects). There are also several magical scrolls and potions to be found. These may be good or evil; for example the strength scroll gives you the power to push wooden casks, whereas the lightning-strike scroll is fatal if used.

The guardians of the castle, the vicious Ravenbees have to be avoided or, in some cases, destroyed — but there is only one way to kill them; you must discover how as you venture through the dank passages of the castle. Your quest is not an easy one — only with time, experience and a little luck will you unravel all the mysteries within Ravenskull Castle.

PRIZE COMPETITION

If you are skilful enough to complete Ravenskull, you can enter our prize competition. The prizes include a £100 first-prize, with Superior Software T-shirts for runners-up.

Use your micro to speed up your mail...

Telemesssage

1 POSTAGE PAID GREAT BRITAIN PG 413

Another example of electronic mail in action!

and next-day delivery is guaranteed!

Everyone knows that "first class" mail is far from perfect. The Consumers' Association reported in June that two out of every five first class letters fail to be delivered the day after they are posted.

So if you have an urgent letter that just HAS to be delivered tomorrow, what do you do?

If you have a home or business computer the answer is at your fingertips.

You compose the letter on your computer. Then, in a simple operation that takes only a few seconds, you send it down the telephone line to MicroLink, the electronic mail service operated in association with Telecom Gold.

That's the end of your part in the story. From now on electronics take over. Your letter is fed automatically into the national British Telecom Telemesssage service. It's switched to the delivery office nearest the recipient's address, where it's printed out on a letter-quality printer and put into a distinctive yellow envelope. And providing it was sent any time up to 8pm, it is delivered by the local postman by breakfast time the next day. Exactly as you'd typed it out the day before.

And how much does this ultra-fast service cost? From just £1.25 to send a letter of up to 350 words to any address in the UK (and an extra £1.70 to any address in the USA). You can also have it accompanied by a colourful greetings card (choose from 16 different varieties) for another 65p.

Telemesssages is just one of many services offered by MicroLink that are designed to speed up communications. Find out more by returning the coupon below.

Please send me more information about your speedy Telemesssage service and other aspects of MicroLink.

REPTON

THE ULTIMATE CHALLENGE

3

The Screen Editor.

The Character Editor.

Being pursued by a Monster

The Time Bomb is located

The Poisonous Fungus grows insidiously

Collecting a Golden Crown

Are you ready for the ultimate challenge?

Our original Repton game was immediately acclaimed as a refreshingly new concept: a game requiring dexterity to complete its arcade-style elements, and clear logical thinking to solve its strategic puzzles. Repton involves retrieving treasure from cleverly-constructed traps of falling rocks whilst avoiding the fearsome monsters and haunting spirits. "This is an astounding game reaching new heights in BBC arcade adventures," enthused the Micro User magazine.

Last Christmas saw the release of Repton 2, larger and much more challenging than before. Acorn User's Technical Editor Bruce Smith wrote: "Repton 2 is better than anything I've played on the BBC Micro or Electron. Brilliant!"

Now, completely rewritten and improved for the Commodore, Amstrad, BBC Micro and Electron, we proudly present Repton 3. For the first time, a screen-designer is included: try to devise screens that will perplex your friends, then see if you can solve their newly-designed screens. Another innovation is the character-designer which enables you to design your own monsters, rocks, eggs, spirits, diamonds... any or all of the game's characters can be redefined as you wish.

Repton 3 is much larger than its predecessors — it has 24 fascinating screens, and players who are skilful enough to complete them all can enter our prize competition described below. All the favourite Repton characters have been retained, together with several new features: a creeping poisonous fungus which grows at an alarming rate; time bombs and time capsules (for puzzles in the 4th dimension); and golden crowns as well-deserved rewards for your endeavours. **Can YOU complete Repton 3?**

PRIZE COMPETITION

If you complete Repton 3, you can enter our competition. Prizes include over £200 in cash, with T-shirts, mugs, badges and pens for runners-up.

A New Concept in Compilations

The Superior Collection Volume 3 features one brand new game, Synchron, together with 7 of Superior Software's classic hits for the Acorn Electron.

Synchron is a fast-action game set against a backdrop of an enormous graphically-detailed scrolling landscape. The landscape is, in total, 1024 times the size of the screen. You must endeavour to complete 16 hair-raising missions; in each mission you have to collect a number of power cylinders, land your spacecraft on a runway with each cylinder in turn, and finally locate and bomb the HQ Building. Whilst skillfully manoeuvring your spacecraft between the defence pylons and force-fields, you are attacked by alien spacecraft and missiles launched from the land bases. A superb game, worth at least £7.95 in its own right.

Acorn Electron dual cassette £9.95
Acorn Electron 3½" disc £14.95

Here's what the computer press said about some of the other titles on this compilation package:—

REPTON: "This is an astounding game reaching new heights in Electron arcade adventures." ... ELECTRON USER

REPTON 2: "Repton 2 is better than anything I've played on the BBC Micro or Electron. Brilliant!" ... ACORN USER

DEATHSTAR: "Deathstar is a super fast, all action arcade classic. It's the sort of game that you can't put down ... The graphics are excellent and the scrolling is very smooth in all four directions. The pace is fast and furious even on the starting screen. This action packed game is recommended for all arcade gamers." ... ELECTRON USER

SMASH AND GRAB: "As usual with Superior products the graphics are excellent, with a good use of colour and no flicker. I expect this game will have you rolling with laughter. I certainly did.
